

AIR TREATMENT & GAS GENERATION

Product Catalogue 2023

Your partner for air treatment & on-site gas generation

Since 1966, Pneumatech has provided industry-leading compressed air treatment and on-site gas generation solutions to customers across the globe. Our compressed air treatment range helps you to protect your upstream equipment, ensures your compressed air system to run more efficiently, avoiding humidity and the build-up of rust, all while supporting you in your quest for the best quality end product. Our on-site nitrogen and oxygen generators provide you with premium, industrial gas without the cumbersome handling of bottles, cost-efficient, easy and at the purity level required by you.

Contents

Compressed Air Treatment	4
On-site Gas Generation	5

Refrigeration Dryers.....7

▶ Cool 12 - 272 - Non-cycling refrigeration dryers	8
▶ AD 15 - 4200 - Non-cycling refrigeration dryers	10
▶ AC 15 - 200 - Cycling refrigeration dryers	14
▶ AC 200 - 630 VSD - Cycling refrigeration dryers	16
▶ AC 650 - 2100 Cycling refrigeration dryers (including VSD solutions).....	18
▶ AC 2650 - 8500 - Large cycling refrigeration dryers (including VSD solutions).....	20
▶ Anti-corrosion treatment (available for all refrigerant dryers)	22

Adsorption Dryers25

▶ PH 2 - 45 HE - Extruded profile heatless adsorption dryers	26
▶ PH 45 - 690 HE with structured desiccant - Heatless adsorption dryers.....	28
▶ PH 55 - 550 HE - Extruded profile heatless adsorption dryers	30
▶ PH 760 - 3390 HE - Welded vessel heatless adsorption dryers	32
▶ The cost-efficient alternative to PH HE adsorption dryers.....	34
▶ PE 760 - 3390 S - Heated purge adsorption dryers	36
▶ PB 210 - 635 HE (P/ZP) - Blower purge/zero purge adsorption dryers	38
▶ PB 760-7400 HE (P/ZP) - Blower purge/zero purge adsorption dryers	40

Membrane Dryers43

▶ PMD 1 - 7 - Membrane dryers	44
▶ M POU 2 - 16 - Point-of-use membrane dryers	48

Gas Generators.....51

▶ PPNG 6 - 90 HE - Nitrogen generator with pressure swing adsorption technology	52
▶ PPNG 6 - 68 S - Nitrogen generator with pressure swing adsorption technology	54
▶ PPNG 100 - 800 HE - Nitrogen generators with pressure swing adsorption technology	56
▶ PPNG 1-12 skid HE - High-pressure nitrogen skid.....	58
▶ PMNG 1 - 3 - Nitrogen generator with membrane technology	60
▶ PMNG 4 - 40 HE - Nitrogen generators with membrane technology	62

▶ PPOG 2 - 18 HE - Oxygen generator with pressure swing adsorption technology	64
▶ PPOG 1 - 120 - Oxygen generator with pressure swing adsorption technology	66
▶ Oxygen filters - PMH D Ox 10 - 2425	68
▶ Oxygen vessels - LV270 - 3000	70
▶ Oxygen solutions	72

Breathing Air Solutions75

▶ BA 25 - 300 - HE breathing air purifiers.....	76
▶ BA 25 - 300 - S breathing air purifiers	78

Filter Solutions81

▶ Ultimate water separators	82
▶ Ultimate filters - Threaded filters.....	84
▶ Ultimate filters - Elements.....	86
▶ FF 1 - 12 - Flanged filters	88
▶ VT - Activated carbon towers + vessels.....	90
▶ HP - High pressure filters	92
▶ FP & FP HP - Process filters (incl. high pressure)	94
▶ FS - Sterile filters	96
▶ Competitor spare parts - Alternative desiccants.....	98

Condensate Management..... 101

▶ WD - Water detector	102
▶ CDE 5-350 - Electronic zero loss drains.....	104
▶ CDT - Timer drains	106
▶ CDF - Mechanical float drains	107
▶ OWS 25 - 5300 - Oil water separators.....	108
▶ ECOBOX 2 - 4 - Oil water separators	110
▶ CA - Air cooled aftercoolers.....	112
▶ CW 300 – 7390 - Water cooled aftercoolers.....	114

Piping Systems..... 117

▶ AIRnet - Aluminium range	118
▶ AIRnet - Stainless steel range	120

Air Receivers..... 123

▶ V Range - Air & Nitrogen receivers.....	124

Compressed Air Treatment

Air treatment is the process of purifying compressed air to remove contaminants such as water (liquid or vapor), dust, dirt, and oil. This is important because these contaminants can cause a variety of problems in systems that use compressed air.

How are contaminants in compressed air formed?

Contaminants in compressed air can be formed in different ways:

- **Water vapor:** Water vapor is naturally present in ambient air and is drawn in by the compressor along with the air. When the air is compressed, the water vapor becomes more concentrated, increasing the risk of condensation.

- **Dust:** Dust and other particulate matter are present in ambient air and can be drawn into the compressor along with the air.

- **Oil:** Compressors contain lubricating oil to keep the moving parts functioning smoothly. Over time, the oil can break down and become contaminated with dirt and other particles, which can be carried into the compressed air stream. Additionally, compressors can leak oil, which can also contaminate the compressed air.
- **Wear and tear:** As compressors age and are used extensively, they can begin to wear down. This can lead to the introduction of additional contaminants, such as metal particles, into the compressed air stream.
- **Piping and hoses:** As compressed air travels through pipes and hoses, it can pick up additional contaminants, such as dirt and moisture, from the inside walls of the pipes and hoses.

What problems can contaminants form?

Contaminants in compressed air can cause various problems, depending on the specific contaminant and the application in which the compressed air is being used. Some common problems that can be caused by contaminants in compressed air include:

- Corrosion of pipe lines
- Bad quality of the end product
- Malfunctioning of controls
- Build-up of ice
- Cultivation of micro-organisms
- Damaged production equipment, leading to inefficiencies and increased costs
- Air pollution, creating unhealthy work environments
- Pollution of the condensate

The Pneumatech solution

As the leader in compressed air quality, Pneumatech offers a comprehensive range of air treatment equipment, including all types of dryers, filters, drains and (oil-)water separators. That means you can get top-quality, fully compatible air solutions from just a single source.

Producing your own nitrogen or oxygen is the smart environmentally friendly choice. Using an on-site gas generator is more cost-efficient, dependable and sustainable than gas deliveries.

How do gas generators work?

To produce your own nitrogen or oxygen, all you need is a compressor and a gas generator system.

That's because air consists of 78% nitrogen and 21% oxygen. When you feed compressed air into a nitrogen generator, it separates the N_2 from the O_2 . There are two main technologies to produce nitrogen or oxygen:

PSA:

Pressure Swing Adsorption (PSA) separates nitrogen from compressed air using a carbon molecular sieve (CMS). As the air passes through a vessel filled with CMS, the oxygen in the air is adsorbed by the CMS. This allows nitrogen to pass through with a purity of up to 99.999% to reach the outlet. PSA generators are ideal for high-purity, high-flow applications.

To generate oxygen a different adsorbent called Zeolite Molecular Sieve is used resulting in the oxygen in the air being adsorbed by the ZMS, instead of the oxygen.

Membrane:

Membrane technology is a very simple, reliable and continuous N_2 production method. Compressed air is pushed through hollow polymer membranes. The oxygen in the air premeates through the fiber walls and escapes into the atmosphere. This leaves quality nitrogen with a purity between 95% and 99.5% at the generator outlet.

The benefits of on-site gas generation:

1. On-site gas generation offers convincing benefits compared to liquid or gaseous N_2 or O_2 deliveries:
2. Cost efficiency: Producing your own nitrogen or oxygen with the purity you need allows you to significantly reduce your cost of gas.
3. Sustainability: Eliminate the transport emissions that gas deliveries generate. In addition, Pneumatech's on-site generation solutions are super efficient, minimizing your energy use and your environmental footprint.
4. A reliable nitrogen or oxygen supply: No need to count on external vendors. On-site generation gives you complete control over your nitrogen supply.
5. No logistics: Say goodbye to always monitoring your N_2 or O_2 supply, working with vendors, and tracking and handling deliveries.

Greater cost-efficiency
saves you money

Eliminating bottle or liquid
deliveries reduces your
environmental footprint

Take charge of your own
nitrogen supply

Less hassle by removing
supply logistics

The Pneumatech solution

Pneumatech's nitrogen and oxygen generators are available with Pressure Swing Adsorption (PSA) technology, resulting in nitrogen purities up to 99,999% and oxygen purities up to 95%. Membrane technology is also offered for nitrogen purity levels up to 99,5%. Pre-defined high-pressure nitrogen skids are available as a plug-and-play solution for various applications.

Refrigeration Dryers

With our refrigeration dryers too, we let you choose between investment cost and lifecycle cost.

Pneumatech's COOL range is our robust, no-frills drying solution, meant for basic condensate removal in your compressed air system. With the AD dryers we guarantee dry air through real-time PDP monitoring, while also reducing power consumption and compressed air losses. Our premium AC dryers optimize the energy consumption based on the actual compressed air demand, through energy saving algorithms or variable speed technology.

Cool 12 - 272 - Non-cycling refrigeration dryers

Features & Benefits

- ▶ Solid performance & strong reliability
 - Stable pressure dew point as low as 5°C/41°F ensuring ISO 8573-1 class 5 quality
- ▶ Compact & easy to install
 - Simple vertical design
 - Plug and play mechanical & electrical connections
- ▶ Super cost saver
 - Low initial investment
 - Efficient cooling system ensures low energy costs
 - Increased lifetime of tools and equipment
- ▶ Easy maintenance at low cost
 - Long service intervals
 - Easy access to key components

General Specifications

- ▶ Non-cycling refrigeration dryers
- ▶ Operating pressure: 4-16 barg/58-232 psig (4-13 barg/58-189 psig from COOL 145 onwards)
- ▶ Max. ambient temperature: 50°C/122°F
- ▶ Flow rate: 21 to 462 m³/hr (12-272 cfm)⁽¹⁾
- ▶ Pressure dew point: 5°C/41°F (ISO 8573-1:2010 class 5)
- ▶ Power supply: 230VAC 50 Hz (60Hz version on request)
- ▶ Refrigerant: R134a (COOL 12-145) or R410A (COOL 184-272)

Applications

Pneumatic tools and equipment

Pneumatic control systems

Painting

Injection moulding

Car shops

Tire inflation

¹ Flow is measured at reference conditions: ambient pressure of 1 bara and 25°C at operating pressure of 7 barg, inlet temperature 35°C .

The compressed air coming out of the compressor is always saturated. Pneumatech's reliable and robust COOL refrigeration dryers are an efficient solution to lower the presence of moisture and the resultant corrosion in your compressed air system. COOL dryers can act as a second line of defence after water separators and aftercoolers giving you a stable dew point as low as 5°C/41°F, maintaining the ISO 8573-1 class 5 air quality.

Designed to work up to 16 barg/232 psig, COOL dryers deliver stable performance thanks to the efficient refrigerant gas and carefully selected components. The simple vertical design and small foot print make COOL dryers the easy-to-use drying solution in various industrial applications such as car shops, spray painting, injection moulding, tire inflation and many more.

Options

Filter support

Bypass valve

Pneumatech's AD 15-4200 non-cycling refrigeration dryers are designed to protect your compressed air system by lowering the presence of moisture in the compressed air. Thanks to the new controller with digital display, real time PDP monitoring is possible. The zero-loss electronic drains avoid compressed air losses. The well-designed heat exchangers ensure maximum cooling efficiency, making the AD dryers a genuine air drying solution in industrial applications. The AD15-105 is introducing the efficient and environmental friendly R513A refrigerant, reducing the global warming potential largely.

The AD125-4200 range is equipped with the winning combination: rotary compressors and R410A refrigerant. This combination is up to 30% more energy efficient, requires 20% less refrigerant gas and is 100% compliant with European regulation EU No 517/2014, hereby significantly reducing the ecological footprint of these dryers. Rotary compressors are moreover very reliable thanks to the low vibration levels and limited mechanical load. R410A guarantees stable evaporation, which makes the pressure dew point of up to 3°C/37°F achievable.

AC 15 - 200 - Cycling refrigeration dryers

Features & Benefits

- ▶ Premium energy efficiency
 - Energy-saving & flow control: adapt energy consumption to the real load
 - Lowest pressure drop over heat exchanger and air piping
 - Zero-loss drains
 - AC15-100 optionally available in 20 bar version with timer drain
- ▶ Strong performance & reliability
 - Stable pressure dew point as low as 3°C
 - Guaranteed drying performance in wide range of ambient temperatures
- ▶ Optimal control and monitoring
 - Energy-saving control
 - Voltage-free contact for remote alarm
 - Auto-restart after voltage-failure
- ▶ Easy installation and maintenance at low cost
 - Pipe connections on top
 - Long service intervals
 - Easy access to key components

General Specifications

- ▶ AC refrigeration dryers: cycling type
- ▶ Operating pressure: 4-16 barg/58-232 psig (4-14 barg/58-189 psig from AC 125 onwards)
- ▶ Max. inlet temperature: 60°C/140°F
- ▶ Flow rate : 22-1026 m³/hr (13-604 cfm)⁽¹⁾
- ▶ Pressure dew point: 3°C/37°F (ISO 8573-1:2010 class 4)
- ▶ Power supply: 115/230VAC 50/60 Hz
- ▶ Refrigerant: R134a (AC 15-100), R410a (AC 125 - 200)

Options

Integrated high efficiency line filters

Electric panel protection IP 54

¹ Flow is measured at reference conditions: ambient pressure of 1 bara and 25°C at operating pressure of 7 barg, inlet temperature 35°C .

Pneumatech's AC range offers premium refrigeration drying technology at the lowest operational costs. All AC dryers are equipped with our proprietary energy saving algorithm, which adapts the energy consumption to the real load by continuously monitoring the ambient temperature and the pressure dewpoint. In this way, the risk of downstream corrosion is reduced to zero at all times. When there is less cooling needed, the refrigerant compressor stops and power consumption is significantly reduced, with savings up to 50%.

Premium energy efficiency is also guaranteed thanks to low pressure drops over the heat exchangers, zero-loss drains and our winning combination: rotary compressors and R410A refrigerant on AC125-200. This combination is up to 30% more energy efficient, requires 19% less refrigerant gas and is 100% compliant with European regulation EU No 517 / 2014.

AC 200 - 630 VSD - Cycling refrigeration dryers

Features & Benefits

- ▶ Variable frequency drive providing variable frequency drive providing unmatched energy savings
 - Up to 60% in energy savings
 - Patented heat exchangers on air to air side allow very low internal pressure drops 100 - 180 mbar (1.5 - 2.6 PSI) depending on the size resulting in less energy consumption of the compressor at or below 0.18 bar / 2.6 PSI
 - Faster payback as low as 1.5 years as compared to non-cycling or thermal mass dryers
- ▶ Increased uptime, powered by ICONS and new PureLogicT™ for advanced control and monitoring
 - PureLogicT™ controller
 - » Touch based advance controller
 - » Modbus, Profibus or Ethernet/IP, (Consult us)
 - Intelligent connectivity system (ICONs)
 - » Insights from PureLogicT™ controller delivered to your device
 - » On-time maintenance to control costs and ensure a longer machine life.
 - » Recognize potential problems before they affect your uptime

General Specifications

- ▶ Stable and guaranteed performance at all operating conditions - PDP of 3°C – ISO 8573- 1:2010 air purity class 4 guaranteed
- ▶ Reduced power consumptions at all conditions – performance is guaranteed even at ambient conditions as high as 46°C (115°F)
- ▶ 100% of the compressed air nominal flow at all operational temperatures up to the maximum
- ▶ No oversizing necessary for operation at maximum temperature with 100% of the nominal flow
- ▶ Reduced energy consumption of the dryer compared to oversized solution
- ▶ Fully hermetically sealed refrigerant compressor with VSD inverter
- ▶ Patented energy efficient HEAT EXCHANGER
- ▶ PurelogicT™ controller
- ▶ Zero loss drains
- ▶ Single electric connection for easy and smooth installation

Reduced total cost of ownership and faster payback – as low as 1.5 years thanks to reduced power consumption:

- Energy consumption by the dryer
- Energy consumption by the compressor due to pressure drop
- Investment
- Installation and maintenance
- **Savings - 60%** - A unique combination of high-efficiency components, smart unit design and an advanced control system enables you to achieve average energy savings of 60%

The AC VSD from Pneumatech raises the bar in refrigerant dryer performance. Using variable speed drive technology, it significantly reduces energy consumption while consistently supplying top-quality air. And, thanks to a carbon footprint that is smaller than that of its competitors, it even benefits the environment.

AC 200-630 VSD is Pneumatech's premium refrigeration dryer range at smaller flows: from 360 to 1080 Nm³/hr (210 CFM to 635 CFM)

The new AC VSD refrigerant dryer from Pneumatech was engineered to make a difference, delivering energy savings of up to 60%. At the same time, the AC VSD supports production quality and reliability and offers a small carbon footprint.

The use of variable speed drive (VSD) technology ensures that the AC VSD only uses the energy it needs at any point. The result is a much lower electric bill that greatly reduces the total cost of dryer ownership.

At the same time, Pneumatech's new dryer produces a stable supply of Class 4 purity air, which helps protect production reliability and quality. The AC VSD maintains its low dew point even in ambient temperatures of up to 46°C.

In spite of its sophisticated technology, the dryer is easy to operate thanks to its intuitive PureLogic™ controller. Users can even analyze and optimize their dryer's performance from anywhere by taking advantage of the advanced connectivity and remote monitoring option.

But the AC VSD's benefits extend beyond its outstanding performance. Due to its low energy consumption, it features a smaller carbon footprint than its competitors. Combined with an excellent TEWI-score, it helps companies meet their climate goals.

Lastly, the new AC VSD from Pneumatech is more compact than conventional dryers and can fit even in tight spaces.

AC 650 - 2100 Cycling refrigeration dryers (including VSD solutions)

Features & Benefits

- ▶ Premium energy efficiency
 - Energy-saving & flow control: adapt energy consumption to the real load
 - Variable speed range: exact match between energy consumption and actual demand (available for AC 1600-2100)
 - Lowest pressure drop over heat exchanger and air piping
 - Zero-loss drains
- ▶ Strong performance & reliability
 - Stable pressure dew point as low as 3°C
 - Rotary refrigerant compressors: limited mechanical load & low vibrations
 - Guaranteed drying performance in wide range of ambient temperatures
 - Refrigeration cycle optimized in all conditions thanks to automatic expansion valve & electronic hot gas bypass valve
- ▶ Air-cooled as well as water-cooled versions available
- ▶ Optimal control and monitoring thanks to the Purelogic™ controller
 - Communication via industrial protocols like Modbus, Profibus or Ethernet/IP
 - Internet-based visualization
- ▶ Easy maintenance at low cost
 - Pipe connections on top
 - Long service intervals
 - Easy access to key components

General Specifications

- ▶ AC refrigeration dryers: cycling type including VSD option (only for AC 1600-2100)
- ▶ Operating Pressure: 2 - 14 barg/29 - 180 psig
- ▶ Max. temperature: 50°C/122°F
- ▶ Flow rate: 1116-3636 m³/hr (657-2141 cfm)⁽¹⁾
- ▶ Pressure dew point: 3°C/37°F
- ▶ Power supply: 400V/50Hz; 380V/60Hz; 400-460V/60Hz
- ▶ Refrigerant: R410a
- ▶ Cooling type: Air-cooled and water-cooled

AC 650-2100 is Pneumatech's premium refrigeration dryer range at higher flows: from 1120 up to 3636 m³/hr (657-2141 cfm).

As in the small AC range, operating costs are significantly reduced thanks to the energy saving and flow switch algorithms, the zero-loss drains, the low pressure drop over the heat exchangers and the combination of rotary compressors and R410A refrigerant. The refrigeration cycle is further optimized in all working conditions by making use of the automatic expansion valve & electronic hot gas bypass valve.

From AC 650 onwards, dedicated variable speed (VSD) variants have been added to the range. The VSD controller incorporated

in these dryers matches the energy consumption to the actual compressed air demand. This reduces energy used by as much as 70%, compared to conventional dryers. It works by varying the speed of the compressor, hereby ensuring a stable dew point.

The Purelogic™ is installed as standard on all dryers: it ensures maximum reliability by monitoring the most important parameters of the dryer and offers impressive control and monitoring capabilities, like internet-based visualization.

The entire range is available in both air-cooled and water-cooled versions.

*3 control modes i.e Economy, lowest dewpoint and maximum saving control offer different power consumptions.

AC 2650 - 8500 - Large cycling refrigeration dryers (including VSD solutions)

Features & Benefits

- ▶ Stable and guaranteed Performance at all operating conditions - PDP of 3°C thanks to direct expansion technology
- ▶ Lowest pressure drop
- ▶ Advanced control algorithm with three different control modes for variable speed versions:
 - Regulation of the refrigerant compressor based on actual load
 - Economy: PDP = ambient temperature minus 20°C (68°F)
 - Lowest Dew-point: best possible PDP
 - Max. saving: PDP = ambient temperature minus 15°C (59°F)
 - Much better turndown efficiency is achieved when the unit runs in a partial load condition
- ▶ Zero glide refrigerant – R410a: No-temperature-glide effect resulting in stable guaranteed PDP
- ▶ Comprehensive scope of supply:
 - Energy efficient heat exchanger
 - Fully hermetically sealed refrigerant compressor with phase sequence relay
 - Refrigerant filter/dryer (standard on all AC 2650-8500 fixed speed and VSD dryers)
 - Electronic hot gas bypass valve (EHGPV)
 - Purelogic™ for advanced control and monitoring

General Specifications

- AC refrigeration dryers: cycling type including VSD
- Operating Pressure: 4-14 barg/ 58-189 psig
- Max. Ambient temperature: 46°C/115°F (AC 5100/6400/8500 VSD air cooled - 40°C/115°F)
- Flow rate: 450-14400 m³/hr (2650-8475 cfm)
- Pressure dew point: 3°C/37°F
- Power supply: 400V/50Hz; 380V/60Hz; 400-460V/60Hz
- Refrigerant: R410a
- Cooling type: Air-cooled and water-cooled

Reduced lifecycle costs and faster payback thanks to reduced power consumption

Wooden box packaging

AC 2650-8500 FS/VSD is Pneumatech's premium refrigeration dryer range at higher flows: from 4500 up to 14400 m³/hr (2650-8475 cfm). AC 2650-8500 (VSD) refrigerant dryers are engineered in house and tested using the most stringent methods (at ambient temperatures up to 46°C/115°F). They exceed the international standards for compressed air purity and are tested according to ISO 7183:2007.

New AC Range is the most efficient dryer for continuous and varying air demand applications. A combination of new innovative technologies integrated in the new AC 2650-8500 (VSD) dryers'

design makes them a perfect match for customers looking for reliable equipment with a low cost of ownership. The unique combination of high efficiency components, a smart unit design and an advanced unit control system gives an opportunity to save on average 50% of the consumed energy.

Significantly reduced power consumption and low quantities of refrigerant make sure the AC 2650-8500 (VSD) dryers operate at the lowest possible carbon footprint

1. Flow is measured at reference conditions: 1 bara and 20°C at operating pressure of 7 barg, inlet temperature 35°C & std PDP of 3°C at the outlet.

For accurate sizing for your operating conditions consult Pneumatech

Anti-corrosion treatment (available for all refrigerant dryers)

Problem

Refrigerant dryers can be subjected to severe corrosion when placed in environments rich of e.g ammonia and sulfurs, or close to the seaside. In these cases incompatible metals like copper will be affected since the condenser-fan is blowing a high volume of polluted air through the dryer. Corrosion and pollution of condensers will directly impact the dryer performance. Corrosion can even lead to leaks in the condenser and refrigeration piping.

Solution

Pneumatech offers a long-lasting corrosion protection to the condenser and the refrigerant piping without affecting heat transfer and pressure drop. The heat conductive pigmentation in the coating is oriented in such a way that it creates a very high chemical resistance at a low layer thickness. Therefore it is considered the best available option to prevent refrigeration dryer failure and unnecessary energy consumption.

Technical specifications	
Coating type	Aluminum pigmented polyurethane
Color	Champagne
Pretreatment	Degreasing
Temperature Range (dry)	-20 to 150°C (-4° to 302°F)
Substrates	Aluminum and Copper
ASTM B117	4000+ hours(neutral-salt spray test)
Kesternich (2.0 ltr SO ₂)	80 cycles
Layer Thickness	25-30 µm (1 mil)
UV Resistance	Excellent
Adhesion (cross hatch)	0 (European) 5b (USA)
Chemical Resistance	Excellent

Coating resistance of some typical corrosive gas vapors (based on exposure temperature of 20°C/68°F) – maximum concentrations

Chlorine	64 ppm	Ethanol	320 ppm
Ammonia	160 ppm	Sulphuric acid	320 ppm
Phosphoric acid	320 ppm	Seawater	640 ppm

Adsorption Dryers

Pneumatech offers four different adsorption dryer technologies. Heatless dryers (PH) have the lowest initial investment cost, while zero-purge adsorption dryers (PB ZP) the lowest lifecycle cost. Heated purge (PE) and blower purge (PB) dryers balance between both.

No matter what your preference is, Pneumatech guarantees stable, dry air at the lowest operating costs and with excellent control and monitoring capabilities for each dryer you select.

PH 2 - 45 HE - Extruded profile heatless adsorption dryers

Features & Benefits

- ▶ Advanced energy management for lowest operating costs
 - Compressor synchronization
 - Purge nozzle optimization (optional)
 - PDP control (optional)
- ▶ High-quality, high-efficient desiccant, selected for the right application – molecular sieves
- ▶ Spring-loaded cartridges, hence minimizing the risk of crushed desiccant
- ▶ Counter-current regeneration for optimal energy efficiency and guaranteed dry air
- ▶ Designed for transportability & mountability
 - Dryer can be installed vertically or horizontally
 - Wall-mounting kit (optional)
- ▶ In & outlet can be reversed
- ▶ Low noise levels while purging
- ▶ High reliability and robust design

General Specifications

- ▶ Heatless adsorption dryers: extruded profile design
- ▶ Dew points achievable: -40°C/-40°F & -70°C/-94°F
- ▶ Pressure range: 4-16 barg/58-232 psig
- ▶ Ambient temperature range: 1-50°C/34-122°F
- ▶ Inlet temperature range: 1-60°C/34-140°F
- ▶ Power supply: 230VAC 50/60Hz

Options

Purge nozzle optimization

Wall mounting kit

PDP control

Incorporating high-quality components, PH heatless adsorption dryers provide you with clean, dry air to extend the life of your equipment and products. Heatless adsorption dryers use dry, expanded purge air to remove moisture from the desiccant material.

PH 2-45 HE adsorption dryers are capable of drying air to a PDP of -70°C/-94°F, simply by reducing the flow, thanks to the use of carefully selected molecular sieves. The desiccant is housed in a robust extruded aluminum body, which can operate until 16 barg/232 psig (fatigue load). The dryers are equipped with a mounted pre-filter and an integrated after-filter as standard,

can be installed vertically and can also be wall-mounted with a specially designed wall-mounting kit (optional).

The controller ensures the lowest operational costs thanks to compressor synchronization and the optional PDP control. LED's on the controller indicate whether power supply is connected, towers are pressurized and solenoids are functioning properly. It also provides with preventive maintenance information. Alarms can also be triggered remote thanks to the available voltage-free contact.

PH 45 - 690 HE with structured desiccant - Heatless adsorption dryers

Features & Benefits

- ▶ Structured desiccant offers highly efficient air flow and regeneration
- ▶ Stable low pressure dew point
- ▶ 40% longer desiccant lifetime
- ▶ Easy desiccant maintenance
- ▶ No desiccant dust that can cause dryer failures and compromise production
- ▶ Pneumatic valves add robustness in demanding environments
- ▶ Vertical or horizontal installation
- ▶ Purge nozzle optimization
- ▶ PDP control (optional for DC1 controller)
- ▶ Wall-mounting kit (optional for Simplex models)

General Specifications

- ▶ Heatless adsorption dryers: extruded profile design
- ▶ Dew points achievable: -20°C/-5°F, -40°C/-40°F
- ▶ Pressure range: 4-14 barg/58-203 psig
- ▶ Ambient temperature range: 2-45°C/36-113°F
- ▶ Inlet temperature range : 2-60°C/ 36-140°F
- ▶ Power supply: 230VAC 50/60Hz & 115VAC 50/60Hz

Options

Wall mounting kit

The Pneumatech PH HE adsorption dryer has always earned its High-Efficiency label. Its new models with structured desiccant take these energy savings to a new level. In fact, thanks to their groundbreaking solid desiccant, the newest additions to the PH HE range offer the lowest total cost of ownership on the market. They also set new standards in reliability, low maintenance requirements and versatility for truly superior dryer performance.

A new type of heatless adsorption dryer

Solid desiccant:

- Much more efficient air flow reduces energy costs

- Evenly distributed air flow extends desiccant lifetime
- 40% longer lifetime
- No desiccant dust to filter out
- Fast and easy maintenance

Pneumatic valves: enhance reliability in tough conditions

PureLogic™ Touch controller:

- Easy to use
- Optimizes performance and efficiency of the dryer
- Connectivity to DCS, SCADA and PLC systems available

Flow is measured at Reference Conditions : 1 bara and 20°C at operating pressure of 7 barg, inlet temperature 35°C & std PDP of -40°C or -20°C at the outlet
For applications that require -70° PDP, please refer to the previous PH HE range

PH 55 - 550 HE - Extruded profile heatless adsorption dryers

Features & Benefits

- ▶ Advanced energy management for lowest operating costs
 - Compressor synchronization
 - Purge nozzle optimization
 - PDP control (optional)
- ▶ Best-in-class performance thanks to unique valve and exhaust design (patent pending)
 - Lowest pressure drop during drying
 - Lowest purge loss by ensuring maximum purge air expansion during regeneration
- ▶ Low noise levels during purge and blow-off
- ▶ High-quality, high-efficient desiccant, selected for the right application
 - PDP -70°C/-94°F: molecular sieves
- ▶ Spring-loaded desiccant, minimizing the risk of crushing
- ▶ Counter-current regeneration for optimal energy efficiency and guaranteed dry air
- ▶ Designed for transportability & mountability
 - Wall-mounting kit for PH 55-190 HE (optional)
- ▶ Optimal control and monitoring thanks to the Purelogic™ controller (optional)
- ▶ Desiccant bags for easy service from the top

General Specifications

- ▶ Heatless adsorption dryers: extruded profile design
- ▶ Dew points achievable: -70°C/-94°F
- ▶ Pressure range: 4-14 barg/58-203 psig
- ▶ Ambient temperature range: 1-45°C/34-113°F
- ▶ Inlet temperature range: 1-50°C/34-122°F (For temperatures up to 60°C/140°F: see HIT option)
- ▶ Power supply: 230VAC 50/60Hz & 115VAC 50/60Hz

Options

High inlet temperature

Wall mounting kit

PDP control

Purelogic controller

IP65 protection

Incorporating high-quality components, PH heatless adsorption dryers provide you with clean, dry air to extend the life of your equipment and products. Heatless adsorption dryers use dry, expanded purge air to remove moisture from the desiccant material.

PH 55-550 HE adsorption dryers are available in one PDP variant: -70°C/-94°F, optimized to provide the lowest purge loss. The unique manifold (patent pending) includes pilot air controlled 3/2-way valves, which switch fast and reliably. The pressure drop over the valves is reduced to a minimum. This does not only result in a low pressure drop over the dryer, but also ensures maximum purge air expansion during regeneration. The latter makes that the purge consumption of the dryers has been reduced significantly.

The desiccant is spring-loaded and housed in a robust extruded aluminum body, which can operate up to 14 barg/203 psig (fatigue load). The dryers are equipped with a mounted pre-filter and after-filter as standard and can also be wall-mounted with a specially designed wall-mounting kit (optional).

Operating costs are optimized at all times thanks to the availability of compressor synchronization and purge nozzle optimization as standard and PDP control as option. The full machine status can be checked on the display of the controller and the vessel pressure gauges on the unit.

The controller indicates whether power supply is connected, towers are pressurized, valves are functioning properly or preventive maintenance needs to be done. In case the optional PDP control is connected, the PDP value can monitored from the display. Alarms and warnings can also be triggered remote with the available voltage-free contacts.

Optionally the Purelogic™ can be used as central brain of the adsorption dryer.

The Purelogic™ offers impressive control and monitoring capabilities, and can communicate with industrial protocols as Modbus, Profibus or Ethernet/IP.

PH 760 - 3390 HE - Welded vessel heatless adsorption dryers

Features & Benefits

- ▶ Available in three standard variants
 - With Standard DC1 Controller (PDP Control optional)
 - With Purelogic™ (PDP control std available)
 - With Pneumatic Controller (no need of electricity for the installation and no PDP control possible)
- ▶ Lowest possible pressure drop thanks to innovative open silencer design
- ▶ Improved performance with reduced purge rate to 16% across the complete range
- ▶ Advanced energy management for lowest operating costs
 - PDP control - (std with Purelogic™ and optional with DC1 Controller)
 - Compressor synchronization
 - Purge nozzle optimization (optional)
- ▶ High-quality, high-efficient desiccant, selected for the right application
 - PDP -40°C/-40°F (std): activated alumina
 - PDP -70°C/-94°F and high inlet temp. (option): molecular sieves
- ▶ Minimal risk of crushed desiccant thanks to the large vessel diameter and the sonic nozzle (std available)
- ▶ Counter-current regeneration for optimal energy efficiency and guaranteed dry air
- ▶ High reliability and robust design
- ▶ Low noise levels while purging
- ▶ Designed for transportability
- ▶ Optimal control and monitoring thanks to the Purelogic™ controller

General Specifications

- ▶ Heatless adsorption dryers: welded vessel design
- ▶ Dew points achievable: -40°C/-40°F & -70°C/-94°F
- ▶ Pressure range: 4-9 barg/58-130 psig (14 barg/203 psig variant available as separate variant)
- ▶ Ambient temperature range: 1-50°C/34-122°F
- ▶ Inlet temperature range: 1-55°C/34-131°F
- ▶ Power supply: 230VAC 50 Hz; 115VAC 60 Hz 3 ph

Pneumatech presents the newly designed and significantly improved heatless adsorption dryer range – PH 760-3390 HE. Incorporating high-quality components, PH heatless adsorption dryers provide you with clean, dry air to extend the life of your equipment and products. Heatless adsorption dryers use dry, expanded purge air to remove moisture from the desiccant material.

PH 760-3390 HE adsorption dryers are capable of drying air to a PDP of -40°C/-40°F as standard and -70°C/-94°F as option for higher flows up to 5760 m³/hr/3390 cfm. The desiccant is housed in welded vessels, which are coated and can operate up to 9 barg/130 psig (fatigue load) with std variant and up to 14,5 barg/203 psi with high pressure variant (fatigue load). All dryers can be equipped with 2 coalescing pre-filters before and 1 particulate filter after the dryer (optional).

Thanks to ingeniously designed mechanical components i.e open type of silencers and large vessels, PH 760-3390 HE range offers highest performance with lowest pressure drop and improved purge loss of 16%.

Considering different needs of the customers, the PH 760-3390 HE range offers 3 different controller for different requirements. DC 1 Controller version has a basic controller with required controls and monitoring such as Service Alarm, General alarm relay, synchronization control and optional dew point control whereas Purelogic™ controller version will have the Purelogic™ as central brain of the adsorption dryer. The Purelogic™ optimizes operating costs; ensures maximum reliability by monitoring the most important parameters; and offers impressive control and monitoring capabilities. For special applications where Pneumatic control is preferred and no electricity is possible, PH 760-3390 HE also operates with Pneumatically enabled controller.

*1. Flow is measured at Reference Conditions: 1 Bar(a) and 25°C at operating pressure of 7 bar (g), inlet temperature 35°C & std PDP of -40°C at the outlet

*2. Filters are sized at reference conditions. Consult the AML of the filters for sizing outside the reference conditions.

For accurate sizing for your operating conditions consult Pneumatech

The cost-efficient alternative to PH HE adsorption dryers

Features & Benefits

- ▶ Advanced energy management for lowest operating costs
 - Compressor synchronization
 - Purge nozzle optimization (2 nozzles)
 - PDP control (optional)
- ▶ High reliability and low maintenance costs thanks to unique valve design (patent pending)
- ▶ High-quality desiccant, resulting in a consistent PDP of $-20^{\circ}\text{C}/-3^{\circ}\text{F}$ or $-40^{\circ}\text{C}/-40^{\circ}\text{F}$
- ▶ Spring-loaded desiccant, minimizing the risk of crushing
- ▶ Counter-current regeneration for optimal energy efficiency and guaranteed dry air
- ▶ Designed for transportability & mountability
 - Wall-mounting kit for PH 55-140 S (optional)
- ▶ Advanced controller to monitor machine status at all times
- ▶ Desiccant bags for easy service from the top

General Specifications

- ▶ Heatless adsorption dryers: extruded profile design
- ▶ Dew points achievable:
 $-20^{\circ}\text{C}/-3^{\circ}\text{F}$ & $-40^{\circ}\text{C}/-40^{\circ}\text{F}$
- ▶ Pressure range:
4-14 barg/58-203 psig
- ▶ Ambient temperature range:
 $1-45^{\circ}\text{C}/34-113^{\circ}\text{F}$
- ▶ Inlet temperature range:

PDP control

Incorporating high-quality components, PH heatless adsorption dryers provide you with clean, dry air to extend the life of your equipment and products. Heatless adsorption dryers use dry, expanded purge air to remove moisture from the desiccant material.

PH 55-550 S adsorption dryers are available in 2 PDP variants: -20°C/-4°F and -40°C/-40°F. The unique manifold (patent pending) includes pilot air controlled 3/2-way valves, which switch fast and reliably.

The desiccant is spring-loaded and housed in a robust extruded aluminum body, which can operate up to 14 barg/203 psig (fatigue load). Pre- and afterfilters are delivered as standard with every dryer.

Operating costs are optimized at all times thanks to the availability of compressor synchronization and purge nozzle optimization as standard and PDP control as option. The full machine status can be checked on the display of the controller and the vessel pressure gauges on the unit. The controller indicates whether power supply is connected, towers are pressurized, valves are functioning properly or preventive maintenance needs to be done. In case the optional PDP control is connected, the PDP value can be monitored from the display. Alarms and warnings can also be triggered remote with the available voltage-free contacts.

PE 760 - 3390 S - Heated purge adsorption dryers

Features & Benefits

- ▶ Advanced energy management for lowest operating costs
 - Compressor synchronization
 - PDP control (optional)
 - Regeneration & cooling temperature control
- ▶ High-quality, high-efficient desiccant, selected for the right application
 - PDP -40°C/-40°F (std): Activated Alumina⁽¹⁾
 - PDP -70°C/-94°F (option): Molecular sieves and Activated alumina
- ▶ Minimal risk of crushed desiccant thanks to the sonic nozzle and the large vessel diameter
- ▶ Counter-current regeneration for optimal energy efficiency and guaranteed dry air
- ▶ High reliability and robust design
- ▶ Low noise levels while purging
- ▶ Designed for transportability
- ▶ High efficient heaters, designed for maximum lifetime and minimal risk
- ▶ Optimal control and monitoring thanks to the Purelogic™ controller

General Specifications

- ▶ Heated purge adsorption dryers: welded vessel design
- ▶ Dew points achievable: -40°C/-40°F & -70°C/-94°F
- ▶ Pressure range: 4-10 barg/58-145 psig
- ▶ Ambient temperature range: 1-40°C/34-104°F

¹For PE760S (-40°C PDP) Desiccant used is silica gel WR & NWR.

With distinctive, patented technology, PE adsorption dryers provide you with a dry air solution; at a lower initial investment cost than PB blower purge dryers and a lower lifecycle cost than PH heatless dryers. PE dryers use heated purge air to remove moisture from the desiccant material.

PE 760S-3390S adsorption dryers are capable of drying air to a PDP of -40°C/-40°F as standard and -70°C/-94°F as option. The desiccant is housed in welded vessels, which are coated and can

operate up to 10 barg/145 psig (fatigue load). Mounted pre- and after- filters can be ordered as an option.

The Purelogic™ is the central brain of the adsorption dryer. It optimizes operating costs thanks to the availability of regeneration temperature control, PDP control (optional) and compressor synchronization; ensures maximum reliability by monitoring the most important parameters of the dryer; and offers impressive control and monitoring capabilities.

PB 210 - 635 HE (P/ZP) - Blower purge/zero purge adsorption dryers

Features & Benefits

- ▶ Advanced energy management for lowest operating costs
 - Compressor synchronization
 - PDP control
 - Regeneration & cooling temperature control
 - Purge nozzle optimization (optional)
- ▶ Zero-purge variants for lowest life-cycle costs
 - Purge back-up mode for ambient conditions outside of limitations
- ▶ High-quality, high-efficient desiccant, selected for the right application
 - PDP -40°C/-40°F (std): silica gel WR & NWR
 - PDP -70°C/-94°F (optional): molecular sieves
- ▶ Minimal risk of crushed desiccant thanks to the sonic nozzle and the large vessel diameter
- ▶ Counter-current regeneration for optimal energy efficiency and guaranteed dry air
- ▶ High reliability and robust design
- ▶ Low noise levels while purging
- ▶ Designed for transportability
- ▶ High efficient heaters, designed for maximum lifetime and minimal risk
- ▶ Compact, efficient and reliable side-channel centrifugal blower
- ▶ Optimal control and monitoring thanks to the Purelogic™ controller

General Specifications

- ▶ Blower purge & zero purge adsorption dryers: welded vessel design
- ▶ Dew points achievable: -40°C/-40°F & -70°C/-94°F (-70°C/-94°F only with Purge Cooled option)
- ▶ Pressure range: 4-14 barg/58-203 psig
- ▶ Ambient temperature range: 1-45°C/34-113°F
- ▶ Inlet temperature range: 1-50°C/34-122°F
- ▶ Power supply: 400VAC 50Hz; 440-460VAC 60Hz

Options

-70°C PDP variant available
(only available on blower purge variants)

Reverse in and outlet pipe

NEMA 4 electrical enclosure

Insulated vessels

Inlet blower filters

Purge nozzle optimization

PB dryers are for customers who focus on energy efficiency and low lifecycle costs, while maintaining the highest standards in air purity. PB dryers use heated blower purge air to remove moisture from the desiccant material and have therefore no purge loss during regeneration. The Zero Purge variants reduce life cycle cost even further by also eliminating purge loss during cooling.

PB 210-635 HE adsorption dryers are capable of drying air to a PDP of -40°C/-40°F as standard and -70°C/-94°F as option for purge units. The desiccant is housed in welded vessels, which are coated and can operate up to 14.5 barg/210 psig (fatigue load). All dryers are standard equipped with 2 coalescing pre-filters before and 1 particulate filter after the dryer.

Operating costs are reduced to the absolute minimum thanks to PDP control, regeneration & cooling temperature control and compressor synchronization; which are all integrated in the Purelogic™ controller. Zero Purge variants are equipped with a purge back-up mode which switches the dryer to purge cooling mode in case PDP could not be met at ambient conditions outside of limitations. The Purelogic™ also ensures maximum reliability by monitoring the most important parameters of the dryer and offers impressive control and monitoring capabilities.

PB 760-7400 HE (P/ZP) - Blower purge/Zero purge adsorption dryers

Features & Benefits

- ▶ Smart Cycle Control algorithm delivers energy savings at partial load without dew point sensor (optional)
- ▶ Advanced energy management for low operating costs with compressor synchronization and optional PDP control, regeneration & cooling temperature control, and purge nozzle optimization
- ▶ Optimal control and monitoring thanks to Purelogic™ Touch Controller
- ▶ High quality, high-efficiency, long-life desiccant ensures a PDP of $-40^{\circ}\text{C}/-40^{\circ}\text{F}$ as standard ($-70^{\circ}\text{C}/-94^{\circ}\text{F}$ as option)
- ▶ Minimal risk of crushed desiccant thanks to the sonic nozzle and the large welded vessels
- ▶ Counter-current regeneration for optimal energy efficiency and guaranteed dry air
- ▶ In-house developed and endurance tested components ensure high reliability and low maintenance (four-way and switching valves)
- ▶ The electric heater's design and stainless-steel, insulated build ensure optimal flow, energy efficiency and a long lifetime
- ▶ Compact base frame with forklift slots designed to save floor space
- ▶ Galvanized pipes with flanged connections simplify maintenance and minimize the risk of leakage

General Specifications

- ▶ Blower purge & zero purge adsorption dryers: welded vessel design
- ▶ Dew points achievable: $-40^{\circ}\text{C}/-40^{\circ}\text{F}$ & $-70^{\circ}\text{C}/-94^{\circ}\text{F}$
- ▶ Pressure range: 4.5-10 barg/65-145 psig; PB 4450 & 7400 HE 4.5-9 barg/130 psig (4.5-14.5 barg/65-210 psig available upon request for all models)
- ▶ Ambient temperature range: $1-40^{\circ}\text{C}/34-104^{\circ}\text{F}$ (for temperatures above 40°C and up to 55°C , see high ambient temperature option)
- ▶ Inlet temperature range: $1-45^{\circ}\text{C}/34-113^{\circ}\text{F}$ (for temperatures above 45°C , see high inlet temperature option)
- ▶ Power supply: 400 VAC 50 HZ; 440-460 VAC 60 HZ

Options

-70°C PDP variant available
(only for ZP variants)

2nd PDP read out

Purge nozzle optimization

External pilot air connection for low pressure inlet

High inlet temperature variant
(not applicable on -70°C PDP)

High ambient temperature variant

In and outlet filters

Vessel safety valves

Wooden packaging

The Pneumatech PB 760-7400 HE delivers a low PDP of -40°C/-40°F as standard (-70°C/-94°F optional) with minimal lifecycle costs. The range comes in blower purge and two zero purge variants, each offering flows up to 12,600 m³/hr. The PB HE

keeps your operating costs to a minimum thanks to the superior efficiency of its multiple layered high-efficiency desiccant, its advanced Purelogic™ Touch control features, and its new and unique Smart Cycle Control algorithm.

Adsorption dryer technology

Adsorption dryers remove moisture from compressed air by passing it through one of two towers filled with desiccant. When the desiccant in one tower is saturated, PB HE dryers use heated blower purge air to remove the moisture from the adsorbent

material (while the other tower handles the drying). That means they have no purge loss during regeneration. The zero purge variants reduce lifecycle costs even further by also eliminating purge loss during cooling.

(1) Flow is measured at reference conditions: 1 bara and 20°C at operating pressure of 7 barg, inlet temperature 35°C & std PDP of -40°C at the outlet

(2) Filters are sized at reference conditions. Consult the AML of the filters for sizing outside the reference conditions and for other filters models

(3) For ZP (zero purge) units consult the AML

3 versions to meet your needs

Choose the PB HE that works best for you:

- 1 Purge models with standard cooling, using a small amount of dry air.
- 2 Zero purge models with open loop cooling, using a blower to cool down with ambient fresh air. This is more energy-efficient compared to standard cooling as no compressed air is lost. It is also the ideal choice for moderate climates.
- 3 Zero purge models with closed loop cooling, using an additional air or water cooler. The cooling air runs in a closed loop, preventing the desiccant to become pre-saturated with moisture from the ambient air. This is the best choice for hot and humid climates.

Membrane Dryers

Because they are not powered by electricity, membrane dryers function safely in environments that must be explosion proof such as laboratories. Thanks to their quiet operation, membrane dryers can be used close to the workplace.

Pneumatech offers a range of 5 models for low flow applications.

PMD 1 - 7 - Membrane dryers

Features and Benefits

- ▶ Lowest total cost of ownership ensuring the highest air quality
- ▶ Compact size and flexible design allows different orientation per application
- ▶ Pneumatech's unique PMD dryer range ensures the lowest pressure drop and the lowest purge air use – providing real energy savings without compromise in production reliability and efficiency. Simple yet eco-friendly technology.
- ▶ Dry air in environments with strict safety or environmental requirements:
 - Low flow environments
 - Areas without electrical supply
 - Areas with explosion proof requirements
 - Noise sensitive areas
 - Corrosion sensitive areas
 - Pneumatech's membrane dryers perform where others won't:
 - Small spaces
 - Areas where flexible mounting is required
 - High vibration areas
 - Widely fluctuating temperatures
- ▶ State of the art fiber technology offering maximum efficiency
 - An engineers unique coating helps the PMD membrane dryers increase the separation efficiency between water vapour, oxygen and nitrogen
 - Extremely low air leakages and lowest purge loss in comparison with other standard membrane dryers
- ▶ Lowest pressure drop thanks to minimal air resistance
 - Simple and longitudinal design ensures steady compressed air flow eliminating unwanted twists and turns inside the housing resulting into minimal pressure drop and utmost efficiency
- ▶ Variants to suit your performance needs
- ▶ Equipped with our Ultimate filters for optimal performance
- ▶ Pneumatech's dryer range includes the P and N model range, each in 7 different sizes
- ▶ P range: Ensures a suppression of 32° C (55° F), giving at the reference conditions an outlet air pressure dew point of 3° C (40° F)
- ▶ N range: Lowers the inlet dew point with 55°C (100° F), giving a pressure dew point of -20°C (-5° F) at the reference conditions

Wall brackets

With its pre-filters, Pneumatech PMD dryers remove oil particles and moisture from compressed air in the most demanding conditions, at the lowest energy cost. Thanks to their special fiber technology, PMD dryers ensure the lowest pressure drop and purge air loss for the highest possible efficiency, saving you time and money.

From small spaces to environments with fluctuating ambient temperatures, PMD dryers can perform in a wide variety of harsh and critical conditions. PMD dryers also come with different types of membranes, allowing you to choose the exact air treatment you need and the dew point your operation requires. With an innovative design, PMD dryers provide the quality of air that will increase the reliability and energy efficiency of your production.

PMD 1 - 7 - Membrane dryers

General Specifications

- ▶ Standard equipment, complete scope of supply ensuring peace of mind for you
 - Purge block, fitted onto the dryer, controls the purged air
 - Two pre-filters, all interconnection components included, ensure optimal inlet air quality
 - Flexible inlet and outlet caps allow filters and dryer to be mounted in two settings for optimal use of available space
- Optional equipment
 - Purge air stop to save purge when there is no air consumption
 - Wall mounting
 - Electronic condensate drain
- ▶ Membrane Dryers
 - Pressure dew point suppressions of 15°C (27°F) to as much as 95°C (171°F) are possible. Correction factors give the correct flow
 - Compressed air inlet pressure: 4 - 14bar(g), 58 - 203 psi(g)
 - Ambient temperature range: 1-66°C/34-150°F
 - Inlet temperature range: 1-66°C/34-150°F
 - The achievable PDP of the PMD membrane dryer range is dependent on inlet dew point

M POU 2 - 16 - Point-of-use membrane dryers

Features and Benefits

- ▶ No power source needed
- ▶ Simple yet eco-friendly technology
 - No desiccants or refrigerants used for drying
 - No condensate drains
- ▶ Guaranteed performance
 - High water vapor selectivity thanks to non-porous membrane
 - No penetration of gases other than moisture
- ▶ Maintenance free
 - No wear and tear of any mechanical or electrical part
 - No need of replacement of any component
- ▶ Easy to transport and install
 - Built-in purging circuits
 - Easy and simple dew point adjustments thanks to the purge low control

General Specifications

- ▶ Dew point suppression achievable up to 40°C below inlet temperature
 - Note: only energy-efficient up to pressure dew point reductions of 30°C/86°F
- ▶ Operating pressure range:
0 - 8.5 barg/0-120 psig
- ▶ Operating temperature range:
-20° - 55°C / -4° - 131°F
- ▶ Ambient temperature range:
-20° - 55°C / -4° - 131°F

Applications

Dehumidified
sampling gases for
gas analysers

Laser
machining tool

Paper industry

EDM tools

Food and
beverages

Gas
generators

Pneumatech offers an easy-to-use and simple drying solution for small compressed air needs. Pneumatech's point-of-use membrane dryer does not require any power source, is compact and easy to install. This makes the dryer suitable for various smaller compressed air applications where a higher degree of dehumidification is required, such as laser machining tools, precision measuring equipment, gas analyzers and small gas generators.

The pressure dew point achieved by membrane dryers is dependent on the inlet temperature of the compressed air; but

can go up to 40°C below inlet temperature. This is achieved by a hollow-fiber membrane, where moisture can diffuse through the fine pores of the fiber bundles. When differences in moisture concentration arise between the inside and outside of a fiber membrane, moisture is transferred through the membrane surface to equalize the moisture concentration on both sides of the membrane. Part of the dry air is used as purge air in order to remove the moisture from the incoming wet air.

1. Flow is measured at Reference Conditions: 1 bara and 20°C at operating pressure of 7 barg, inlet temperature 35°C & 40°C dew point reduction on inlet temperature..

Gas Generators

Pneumatech designs and manufactures both standard and engineered on-site gas generator products. Nitrogen and oxygen generators are available with Pressure Swing Adsorption (PSA) technology, resulting in nitrogen purities up to 99,999% and oxygen purities up to 95%. Membrane technology is also offered for nitrogen purity levels up to 99,5%.

Pre-defined high-pressure nitrogen skids have been developed as a plug-and-play solution for various applications like laser-cutting. Our engineering department hence becomes your best partner for all kinds of special requests.

PPNG 6 - 90 HE - Nitrogen generator with pressure swing adsorption technology

Features & Benefits

- ▶ Variable Flow Saver algorithm
 - PPNG 6-90 HE is able to match the lower demand by adapting the PSA cycle and the feed air intake
 - Upto 70% additional energy savings
- ▶ Advanced energy saving control
 - Reduced air consumption at low nitrogen demand
 - Also compensates for altering ambient conditions and purity settings
 - No compressed air use when no nitrogen is consumed
- ▶ Outstanding air factors: thanks to optimised proprietary PSA cycle
- ▶ High-quality, highest efficiency CMS on the market
- ▶ Guaranteed purity
 - Automatically regulates to the requested nitrogen pressure and purity
 - Minimum purity setting: blow off to protect the customers process if the purity isn't reached
 - Zirconia sensors for reliable purity measurement
- ▶ Designed & tested for cyclic load
- ▶ Optimal control and monitoring thanks to Purelogic™ Controller
 - Self-protective monitoring of the feed air quality
 - Feed-air blow-off in case of off-spec conditions
 - Nitrogen flow, purity and pressure measured and controlled
 - Automatic start-up
 - ICONS remote control and connectivity

General Specifications

- ▶ Pressure Swing Adsorption (PSA) nitrogen generators - extruded profile design
- ▶ Nitrogen purity achievable: 95% - 99.9% (PCT Variant) & 99.95%-99.999% (PPM variant)
- ▶ Inlet pressure range: 4-13 barg /60-189 psig
- ▶ Inlet temperature range: 5-60°C/41-140°F
- ▶ Required inlet air quality: 1-4-1 according to ISO 8573-1:2010
- ▶ Power supply: 115-230VAC/50-60Hz
- ▶ IEC, UL and CRN approvals

Options

Wooden Packaging

Outlet (N₂) dewpoint sensor

Room oxygen monitor (wall mounted)

Low ambient option

The PPNG 6-90 HE series is Pneumatech's premium on-site nitrogen solution for low to medium flows, with best-in-class performance and the most complete scope of supply.

The generator has outstanding air factors at full load thanks to the use of highly efficient Carbon Molecular Sieves (CMS) and back-flow pressurization.

The air consumption is also optimized at reduced nitrogen flow or pressure demands, thanks to the advanced energy

saving algorithm, which automatically adjusts the cycle times of the generator.

The control and monitoring capabilities of the PPNG 6-90 HE are truly impressive. Purity is guaranteed at all times by opening the consumer valve only at the requested purity level and flushing nitrogen when purity is not reached. Feed air quality is controlled by monitoring temperature, pressure and PDP. The feed air is blown off in case of contamination. All risks of possible CMS damage are eliminated thanks to the automatic start-up feature.

The PPNG 6-68s series provides an efficient source of nitrogen for use in various industries like food and beverage, pharma, electronics and plastics. PPNG nitrogen generators use Pressure Swing Adsorption technology to extract nitrogen molecules from the compressed air; and can reach purities from 95% up to 99,999%. Nitrogen pressures can go up to 12 barg without the need for an additional booster. The air factors of the PPNG6-68s range are outstanding, making the return on investment very attractive compared to traditional gas supply.

With its PPNG 6-68s series, Pneumatech follows the plug and play philosophy. Pressure vessels, valves, exhaust system,

sensors and controls are all integrated within a compact canopy, designed for easy transport, installation and service.

The Purelogic™ is the central brain of the nitrogen generator. It optimizes operating costs thanks to the availability of the energy saving control; ensures maximum reliability by keeping track of the most important parameters of the generator; and offers impressive control and monitoring capabilities.

The optional flow meter and inlet pressure dew point sensor can be added to the scope of supply to further exploit the monitoring capabilities of the Purelogic™ controller.

PPNG 100 - 800 HE - Nitrogen generators with pressure swing adsorption technology

Features & Benefits

- ▶ Outstanding air factors with innovative PSA cycle design
- ▶ High-quality, high-efficiency Carbon Molecular Sieves
- ▶ Variable Flow Saver decreases air consumption at low nitrogen demand, reducing it to zero when no nitrogen is consumed
- ▶ Purity selection up to 99.999%
- ▶ Guaranteed purity thanks to automatic regulation and zirconia sensors
- ▶ Designed and tested for cyclic load
- ▶ Robust welded design and protective features ensure long CMS and generator lifetime
- ▶ Optional outdoor installation saves on floor space
- ▶ Optimal control, monitoring and connectivity thanks to Purelogic™ Controller

General Specifications

- ▶ Pressure Swing Adsorption (PSA) nitrogen generator
- ▶ Nitrogen purity achievable: 95%-99.9% (PCT) & 99.95%-99.999% (PPM)
- ▶ Inlet pressure range: 5-10 barg/72-150 psig
- ▶ Ambient temperature range: 5-50°C/41-122°F (-10-50°C/14-122°F with desiccant dryer)
- ▶ Required inlet air quality: 2-4-1 according to ISO 8573-1:2010 (2:3:1 required for lower than 5°C/41°F ambient)
- ▶ Power supply: 115V AC/230V AC & 50/60Hz

The PPNG 100-800 HE is Pneumatech's premium high-flow PSA nitrogen generator, delivering best-in-class performance, efficiency, and purity. It offers superior reliability and a long lifetime, even when installed outside. An innovative PSA cycle, highly efficient Carbon Molecular Sieves (CMS), and our unique Variable Flow Saver technology ensure maximum energy savings and sustainability.

PSA nitrogen generation

The PPNG HE uses Pressure Swing Adsorption (PSA) technology to separate nitrogen from compressed air. As the air passes through a vessel filled with Carbon Molecular Sieves (CMS), the oxygen and other trace gases in the air are adsorbed by the CMS, leaving only nitrogen with a purity of up to 99.999% to reach the outlet. PSA generators are ideal for high-purity, high-flow applications.

Options

Wooden packaging

Outlet PDP sensor

Best-in-class PSA performance

Guaranteed purity

- Zirconia sensors provide reliable purity measurement

Long lifetime

- A heavy-duty welded design and a host of protective features ensure a long lifetime of the machine.

Efficiency

- Our innovative PSA cycle and high-efficiency CMS deliver best-in-class efficiency to keep energy costs low.

Advanced Purelogic™ Controller

- Self-protective monitoring of the feed air quality
- Nitrogen flow, purity and pressure measurement and control
- Optional 24/7 ICONS remote monitoring of flow, pressure, purity and all other key data in real time

Outdoor installation

- Save on valuable floor space! The PPNG HE's robust design allows for outdoor installation in temperatures down to -10°C/14°F.

VFS: 40% savings at low load

Traditional nitrogen generators maintain a constant PSA cycle, regardless of the nitrogen demand. Thanks to the Variable Flow Saver algorithm, the PPNG HE is able to match the lower demand by adapting the PSA cycle and the feed air intake. The result: you enjoy up to 40% additional energy savings.

Options

Outlet dewpoint sensor

Monitors the outlet nitrogen pressure dewpoint for critical applications.

External room oxygen monitor

Measures the oxygen level in a room to ensure safety.

Low ambient temperature version

Allows the generator to run in temperatures down to -10°C/14°F.

Low pdp sensor option

If the inlet air pressure dewpoint is -50°C/-58°F or below, a sensor calibrated for these low dewpoints can be provided.

NEMA 4X / IP65 control box

Stainless steel enclosure shields the controller in outdoor installations, protecting it from corrosion and extreme conditions.

PPNG 1-12 skid HE - High-pressure nitrogen skid

Features & Benefits

- ▶ All-in-one solution with all components built-in and piped together
- ▶ Single power supply for the complete skid
- ▶ 30% more efficient than other high-pressure N₂ packages
- ▶ All components are built and tested to work together optimally
- ▶ 40-bar and 300-bar version in different sizes and with a wide range of options
- ▶ VSD compressor delivers double-digit energy savings and emissions reductions
- ▶ 40 or 300-bar booster sized to minimize power use
- ▶ High-efficiency PSA generator with purity selection up to 99.999%
- ▶ Additional filtration is built in as standard to protect critical N₂ applications
- ▶ Optimal control, monitoring and connectivity thanks to Purelogic™ Controller
- ▶ Forklift slots for easy lifting and moving

General Specifications

- ▶ Purity range: 99.95% to 99.999%*
- ▶ Outlet pressures available: 40 barg and 300 barg**
- ▶ Ambient temperature range: 5-50°C/41-122°F***
- ▶ Power supply: 400/3/50 (460/3/60 available upon request)

* Lower purities available upon request

** Different pressures available upon request

*** Above 35°C applications an oversized refrigerant dryer should be selected

Meet Pneumatech's all-in-one high-pressure nitrogen solution. The PPNG skid HE is the complete on-site nitrogen generation system that frees you from dependency on external suppliers. The PPNG skid HE comes in two versions: 40-bar for peak and on-demand nitrogen and 300-bar with bottle storage. Each comes in different sizes to meet your specific needs. Supremely easy to install and operate, the PPNG skid HE ensures an always dependable nitrogen supply while significantly lowering your operational costs.

An all-in-one N₂ solution

The PPNG skid HE combines all components of a nitrogen generation system on one sturdy base frame: a VSD compressor, a high-pressure booster, a PSA nitrogen generator, and all necessary air and nitrogen storage and treatment. No need to specify, integrate, and commission all these separate components. Instead, you get a complete plug-and-play system with just one power supply and one nitrogen connection to manage.

Options

Pressure regulators

Regulate the stored nitrogen pressure to the required application pressure.

Gas mixers

Allow mixing of nitrogen and oxygen for mixed gas applications.

External room oxygen monitor

Measures the oxygen level in a room to ensure safety.

Additional storage

K6 – 6 x 50L cylinders up to 300 Barg, maximum 90 Nm3 volume

K12 – 12 x 50L cylinders up to 300 Barg, maximum 180 Nm3 volume

K16 – 16 x 50L cylinders up to 300 Barg, maximum 240 Nm3 volume

High ambient temperature version

The unit comes as standard with a connection for an optional oversized refrigerant dryer to be easily connected to allow for reliable operation in temperatures higher than 35°C/95°C.

A complete nitrogen system

PPNG HE nitrogen generator: Efficient performance and guaranteed nitrogen purity up to 99.999%.

Purelogic™ controller: Optimal control and easy local and remote monitoring.

4-stage inlet filtration: Guaranteed air quality safeguards the N₂ generator and user applications.

Variable speed drive compressor with integrated refrigerant dryer: Guaranteed stable supply of pressure with double-digit reductions in energy use and emissions.

40 barg receiver or 300 barg cylinder nitrogen storage: Bottle rack with up to 16 high-pressure cylinders or a 40 barg receiver help manage peak demands by providing stored N₂.

40 barg or 300 barg nitrogen booster: Sized to minimize power consumption and number of start/stops.

Additional filtration: Removes contaminants for sensitive applications.

Local control panel and distribution board: One panel to power and control the complete system.

(1) Flow specified is at the outlet of the PPNG HE generator measured in Nm³/h at reference conditions: 1 bara and 20°C

(2) For the capacity at higher ambient temperatures please refer to our skid sizing calculator.

(3) 300 Barg skids will be set as standard to 290 Barg off-load pressure.

PMNG 1 - 3 - Nitrogen generator with membrane technology

Features & Benefits

- ▶ High Quality membrane separator
 - Superior membrane constructed from high quality Aluminum with technically advance fiber.
 - N₂ Generation is achieved without any moving part
 - Outstanding performance for 90-99,5% Nitrogen separation
- ▶ Simple, reliable and user friendly
 - All-in-one plug & play solution
 - All filters integrated in enclosed canopy design
 - Instant supply of nitrogen
 - No specialist installation or commissioning
- ▶ 3-stage pre-filtration integrated in the canopy
- ▶ No power supply required thanks to Pneumatic controlled valves & battery-powered nitrogen analyzer
- ▶ Guaranteed purity
 - Nitrogen analyzer (battery powered) with auto-calibration button (optional)
 - Purity controller to ensure constant N₂ purity at all times
- ▶ Compressed Air savings when desired purity is reached
 - Economizer (pneumatic) automatically stops air consumption when target pressure is reached

General Specifications

- ▶ Membrane Nitrogen Generators
- ▶ Nitrogen purity achievable: 90%-99.5%
- ▶ Inlet pressure range: 4-13 bar/60-189 PSI
- ▶ Inlet temperature range: 5-50°C/41-122°C
- ▶ Required inlet air quality: 1-4-1 according to ISO 8573-1:2010

Options

Economizer

Nitrogen analyser
(battery powered)

Mobile
version

Pneumatech's new smaller range of PMNG nitrogen generators utilizes proprietary membrane separation technology. Membrane generators are an excellent choice in low (90%) to medium (99,5%) purity applications such as tire inflation, fire prevention, tank blanketing and pipeline drying. Nitrogen pressures can go up to 12 bar (g) without the need for an additional booster.

Engineered for simplicity, durability and ease of use make the PMNG what we believe to be the most user friendly unit in the market. All pre-filters and controls are included inside the canopy. Only a supply of dry compressed air is needed to get nitrogen at the outlet of the generator. Also the start-up procedure of the PMNG is made so straightforward that it does not require any specialist.

Pneumatech offers a purity controller that delivers true consistent purity downstream in ANY flow situation. Our simple design allows adjustments to be made easily, with a single screw. The purity is reliably monitored thanks to the optional battery operated Nitrogen Analyser. The optional Economiser system is designed to save the utility costs of operating the compressor and reduces the wear and tear on Air and Nitrogen Systems.

This cost effective solution from Pneumatech significantly reduces Nitrogen costs over traditional sources of Nitrogen supply.

1. Flow is measured at reference conditions: 1 Bar(a) and 20°C at operating pressure of 8 bar (g), inlet temperature 20°C & Air Inlet Quality of ISO 8573-1:2010 class 1-4-1.

PMNG 4 - 40 HE - Nitrogen generators with membrane technology

Features & Benefits

- ▶ Reduced air consumption by 35% on average (up to 51%) versus other membrane generators
- ▶ More flow in the same compact footprint
- ▶ All-in-one plug & play solution
- ▶ Very low sound levels
- ▶ Instant purity selection between 95% and 99.5%
- ▶ Proprietary membrane technology ensuring lasting performance
- ▶ No heater (which requires extra power) needed
- ▶ Guaranteed purity
- ▶ Reliable purity measurement
- ▶ All filters integrated in canopy
- ▶ No buffer vessels required
- ▶ Instant supply of nitrogen
- ▶ No specialist installation or commissioning
- ▶ Optimal control, monitoring and connectivity thanks to new Purelogic™ Controller

General Specifications

- ▶ Membrane Nitrogen Generators
- ▶ Nitrogen purity achievable: 95%-99.5%
- ▶ Inlet pressure range: 4-13 barg/60-189 psig
- ▶ Inlet temperature range: 5-50°C/41-122°F
- ▶ Required inlet air quality: -4:- according to ISO 8573-1:2010
- ▶ Power supply: 115-230VAC/50-60Hz

Options

Oil indicator

Monitors the oil level of the air going into the membranes.

Flow sensor

Ensures 24/7 nitrogen flow monitoring.

Inlet dewpoint sensor

Monitors the inlet dewpoint and triggers a shutdown warning if the dewpoint is too high.

Outlet dewpoint sensor

Visualises the outlet pressure dewpoint for critical applications.

High ambient temperature software

Protects the unit in high ambient conditions.

With the PMNG HE, on-site nitrogen production becomes exceptionally convenient and cost-efficient. A true all-in-one solution, the PMNG HE is ready to go the minute you connect it to your compressor. You don't even need additional process vessels or filtration. You save on floor space too, as the compact and quiet unit can be installed at the point of use. And its 35% on average lower energy use reduces your operational costs and environmental impact.

Membrane nitrogen generation

The PMNG HE uses membrane technology, a very simple, reliable and continuous nitrogen production method. Hollow polymer membranes separate nitrogen from compressed air, permeating enriched oxygen into the atmosphere and leaving quality nitrogen with a purity between 95% and 99.5% at outlet.

Best-in-class membrane technology

- Save 35% on average and up to 51% on running costs compared to other membrane nitrogen generators.
- Everything you need to generate nitrogen is built into the box. No external tanks or filters are needed.
- Top end models provide 43% more flow in the same small
- Thanks to its extremely low sound levels, the PMNG HE can be comfortably installed at the point of use without disturbing operators. canopy size.
- Everything you need to generate nitrogen is built into the box. No external tanks or filters are needed.

PPOG 2 - 18 HE - Oxygen generator with pressure swing adsorption technology

Features & Benefits

- ▶ 30% lower energy consumption than traditional generators
- ▶ 70% additional energy savings at low load
- ▶ Lowers your environmental impact
- ▶ Compact footprint
- ▶ Complete oxygen set-up: air and oxygen quality sensors, pressure regulator, and flow meters included
- ▶ Plug-and-play installation with automatic start-up
- ▶ Easy purity setting
- ▶ Guaranteed purity and cleanliness
- ▶ Optimal control and monitoring thanks to Purelogic™ Controller
- ▶ Connectivity to DCS, SCADA, and PLC systems available
- ▶ Available with IEC and CSA/UL approvals

General Specifications

- ▶ Pressure Swing Adsorption (PSA) Oxygen Generator
 - aluminum extrusions
- ▶ Oxygen purity achievable: 90%-95%
- ▶ Inlet pressure range: 4.5-10 barg /65-145 psig
- ▶ Inlet temperature range: 5-50°C/41-122°F (with the option for -10-50°C/14-122°F)
- ▶ Required inlet air quality: 1-4-1 according to ISO 8573-1:2010
- ▶ Power supply: 115-230VAC/50-60Hz

Options

Low ambient temperature option
(-10°C/14°F)

Oxygen pressure dewpoint sensor

Room oxygen monitor
(wall mounted)

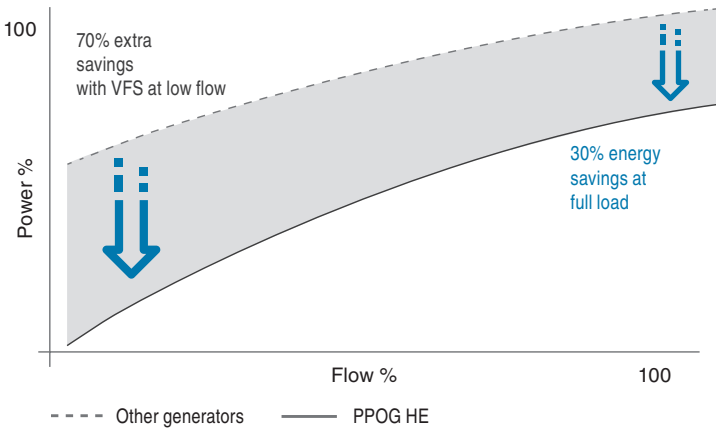

PDP sensor kit

The PPOG High-Efficiency is a true game changer in on-site oxygen generation. 30% more efficient than traditional oxygen generators, the PPOG HE gives you the oxygen volume, purity and reliability you need at a massively reduced cost and a smaller environmental footprint.

Traditional oxygen generators maintain a constant PSA cycle, regardless of the oxygen demand. Thanks to the Variable Flow Saver algorithm, the PPOG HE is able to match the lower demand by adapting the PSA cycle and the feed air intake. The result: you enjoy up to 70% additional energy savings.

Oxygen buffer vessels

Pneumatech gives oxygen to your business. With the PPOG range, Pneumatech offers an attractive replacement for traditional oxygen supply with very interesting returns on investment. The PPOG1-120 series uses Pressure Swing Adsorption technology to extract oxygen from compressed air, resulting in oxygen purity levels up to 95%.

The PPOG1-120 range is a welded vessel design, designed and tested for cyclic load. The Purelogic™ is the central brain of the generator. It optimizes operating costs thanks to the availability of the energy saving control; ensures maximum reliability by

monitoring the most important parameters of the generator; and offers impressive control and monitoring capabilities.

The calibrated flow meters are part of the standard scope of supply, in order to facilitate the start-up process and to provide transparency of the actual oxygen consumption. The optional oxygen buffer vessel is equipped with a pressure regulator, manometer and dust filter. Each of these components is approved for high-purity oxygen use. The optional inlet pressure dew point sensor provides additional security in case the upstream dryer would fail.

1. Flow is measured at Reference Conditions: 1 bara and 20°C at operating pressure of compressed air of 6 barg and oxygen pressure at the outlet 4.5 barg, inlet temperature 20°C & Air Inlet Quality of ISO 8573-1:2010 class 1-4-1

Oxygen filters - PMH D Ox 10 - 2425

Features & Benefits

- ▶ Market-leading performance: Custom-engineered filtration media deliver premium performance that meets quality standard ISO 8573-1:2010 with a significantly reduced pressure drop
- ▶ Corrosion protection: Internal and external electrophoretic paint finish and a tough exterior polyester powder coating
- ▶ Easy service: Externally accessible drain, profiled bowl design, and unique push fit elements ensure quick and reliable maintenance
- ▶ Flow-optimized design: Advanced filter head design for optimized flow performance
- ▶ Suitable for oxygen service: Oxygen filters are specifically designed, cleaned, and packaged to ensure all combustible components are removed from the filter to prevent risk of ignition in oxygen-enriched applications
- ▶ Product safety in mind: Guaranteed safe housing closure with rotational safety stop
- ▶ Dedicated manufacturing line to ensure cleanliness

General Specifications

- ▶ Oxygen dust particle removal down to 0.01 micron
- ▶ 10 to 2425 Nm³/h oxygen flow
- ▶ Maximum working pressure 20.7 Barg
- ▶ Pressure drop <125 mbar
- ▶ Cleaned for oxygen in accordance with ASTM G93

Complete O₂ systems for a wide range of applications

Applications

Biogas

Fish farming

Oxygen therapy

When it comes to O₂, you can't afford to compromise on quality. With a Pneumatech oxygen generation system, you don't have to. That includes our premium PPOG HE PSA oxygen generator, but also all the filters that go with it. Our PMH D Ox filter range was designed, built and cleaned especially for oxygen service to meet the most stringent cleanliness and safety standards. Easy to service and highly efficient, Pneumatech oxygen filters give you industry-leading performance and peace of mind.

PPOG 2-18 HE oxygen generator

30% more efficient than traditional oxygen generators, Pneumatech's PPOG HE gives you the oxygen volume, purity and reliability you need at a massively reduced cost and a smaller environmental footprint.

LV270-3000 oxygen vessels

Our full range of oxygen vessels (270 to 3000L) are built and cleaned for safe oxygen use and are compliant with international standards and regulations.

PMH D Ox 10-2425 oxygen filters

Pneumatech oxygen filters remove particles down to 0.01 micron. Thanks to their premium filtration media and filter design, you enjoy optimized performance, safety and easy service.

Oxygen vessels - LV270 - 3000

Features & Benefits

- ▶ Cleaned and built according to the major international guidelines and classifications for maximum security
- ▶ Materials are chosen to ensure component compatibility and protection from risks, reactions and corrosion
- ▶ Vessels are externally painted and have an inner vitroflex coating
- ▶ All components have been selected to ensure product and operator safety

General Specifications

- ▶ Suitable for oxygen service
- ▶ 270 to 3000L oxygen vessels up to 11 Barg
- ▶ Cleaned and built according to ISO15001 (Anesthetic and respiratory equipment — Compatibility with oxygen), EIGA IGC Doc 33/06 (Guideline to cleaning of oxygen equipment for oxygen service) and ASTM G93/G93M – 19

Complete O2 systems for a wide range of applications

Oxygen solutions

Pneumatech offers packaged solutions for on-site oxygen generation, which guarantee peace-of-mind and quick returns compared to traditional oxygen supply.

A typical lineup consists of a compressor, a refrigerant dryer, filters, buffer vessels and a PPOG oxygen generator; and can be completed with a high-pressure oxygen booster and a bottle filling station. These can be containerized or skid-mounted, depending on the application and the needs.

**DO YOU
KNOW THAT?**

Our boosters are available in 3 kW to 15 kW models and can safely and reliably boost oxygen, nitrogen, helium or argon up to 200 barg / 2900 psig. By boosting a gas to these high pressures, you can bottle the gas you generate. This is particularly interesting to cover peak demand or as emergency back-up.

Pneumatech's on-site oxygen systems generate oxygen from 90% up to 95% purity, and are thus compliant with European pharmacopeia and United States Pharmacopeia (USP). Our production locations are moreover certified according to ISO 13485, the international quality management system for medical devices.

Breathing Air Solutions

Pneumatech's industrial breathing air purifiers offers guaranteed protection against contaminants-complying with International breathing air standards with a small foot print for flexible installations.

BA 25 - 300 - HE Breathing Air Purifiers

Features & Benefits

- ▶ The Pneumatech solution for Industrial Breathing Air applications, build to exceed standards
- ▶ Compliance with stringent international standards
- ▶ Special 7-stage filtration process offered unparalleled compressed air purity
 - Water Separator - For liquid water
 - Fine Filter - For Oil and Water aerosols
 - Super Fine Filter - For Oil and Water aerosols
 - Adsorption Dryer - For Water vapour and CO₂
 - Activated Carbon - For Gaseous impurities
 - Catalyst - For CO oxidation to CO₂
 - Bacteria Filter - For Bacteria & dust particles
- ▶ Advanced energy management for lowest operating costs
 - Compressor synchronization
 - Purge nozzle optimization
 - PDP control - Dew Point switching
- ▶ Advanced gas sensors
 - Direct reading from the controller screen
 - Voltage free contacts for easy integration
 - Adjustable level of warnings
- ▶ Best in class performance thanks to unique and patented purge nozzle design:
 - Purging rate adjusted as per the customer requirements instead of having multiple sets of the nozzles
- ▶ Low noise levels
- ▶ High quality filters
 - Guaranteed air purity thanks to High-efficient glass fibre media.
 - Significant energy savings with lower pressure drops
- ▶ More compact and easy to use -
 - Smaller footprint than previous designs - 35% smaller
 - Pre-assembled and ready for use eliminating complex installation needs

General Specifications

- ▶ Breathing Air Purifiers for Industrial applications.
- ▶ Dew points achievable: -40°C/-40°F
- ▶ Inlet pressure range: 4-13 barg/58-189 psig
- ▶ Ambient temperature range: 5-40°C/41-104°F
- ▶ Inlet temperature range: 5-50°C/41-122°F
- ▶ Power supply: 230 VAC 50 Hz/115 VAC 50Hz
- ▶ Maximum concentration of O₂ - 21,4%
- ▶ Reduced concentration of CO₂ below 500 PPM
- ▶ Reduced concentration of SO₂ / NO_x below 2 PPM

Optimised purge nozzle

The compressed air quality is of vital importance in many applications even more so in breathing air applications. The applications, such as short-blasting, tank cleaning, tunneling, spray painting and many more require breathing air that is free from contaminants that may be present in the compressed air fed breathing air systems. These contaminants are present in the feed air in the form of fumes, oil, vapors, gases, solid particles and microorganisms.

Pneumatech's breathing air purifiers offers guaranteed protection against such contaminants complying with International breathing Air standards. The BA HE range assures safe working environment in a wide range of applications. Built to exceed standards, BA HE purifiers provide certified breathing air, even in situations with polluted intake air to ensure personnel safety at all times. The seven-filtration stages of the BA HE have been

carefully designed to make sure the air quality at the outlet complies with stringent international standards.

New and unique design for the adsorption dryer offers significant advantage. The purge valve design (patent awaited) offers optimum purge performance. The renovated design drastically lowers the purge air consumption saving value for the customer from the compressed air lost. The gas sensors are available as an option to optimize the system further. The possibility to connect the signals to the PureLogic Controller offers optimal control and monitoring.

With approximately 35% reduction in size, new BA HE version offers significant space saving advantage allowing for more flexible installations

BA 25 - 300 - S Breathing Air Purifiers

Features & Benefits

- ▶ The Pneumatech solution for Industrial Breathing Air applications, build to exceed standards.
- ▶ Compliance with stringent international standards
- ▶ Special 7-stage filtration process offered unparalleled compressed air purity
 - Water separator - For liquid water
 - Fine filter - For oil and water aerosols
 - Super fine filter - For oil and water aerosols
 - Adsorption dryer - For water vapour and CO₂
 - Activated carbon - For gaseous impurities
 - Catalyst - For CO oxidation to CO₂
 - Bacteria filter - For bacteria & dust particles
- ▶ Best-in-class performance thanks to unique purge valve design (patent pending)
 - Lowest pressure drop during drying
 - Lowest purge loss by ensuring maximum purge air expansion during regeneration
- ▶ Low noise levels
- ▶ High quality filters
 - Guaranteed air purity thanks to High-efficient glass fiber media
 - Significant energy savings with lower pressure drops
- ▶ Compact and easy to connect design

Filter Solutions

Pneumatech offers you a comprehensive line-up of innovative filter solutions to meet your specific needs. Our filtration solutions are engineered cost-effectively to provide the best air quality and meet today's increasing quality demands.

For general applications we provide oil coalescing, particulate and oil vapor filters in a wide range of flows and pressures. Pneumatech is also your partner for breathing air, silicone-free, sterile & process filtration.

Ultimate water separators

Features & Benefits

- ▶ Energy saving
 - Reducing both energy consumption and operating costs
- ▶ Flexible Installation
 - Modular design and accessible fixings enable simple close coupling assembly
- ▶ Cost effective
 - No replacement components required
- ▶ Product safety in mind
 - Guaranteed safe housing closure with rotational safety stop
- ▶ Corrosion protection
 - Internal and external electrophoretic painting followed by a tough polyester powder coating

General Specifications

- ▶ 13 sizes from 10-2550 m³/h
- ▶ Proven centrifugal technology
- ▶ Unique module with unique vanes to eliminate points of low efficiency
- ▶ Eliminates 99% bulk water, even at low velocities
- ▶ Minimal operating pressure loss (50-60 mbar)
- ▶ No replacement components necessary
- ▶ External accessible drain valve
- ▶ Same installation accessories as the filter series
- ▶ Electronic drain available as an option

Options

Electronic drain

Wall brackets

Integrating into Pneumatech's compressed air filtration range, the new Ultimate Water Separator combines proven centrifugal technology with a new forward thinking housing design to deliver market leading water removal efficiencies – eliminating 99% bulk water with continuously low differential pressure.

The custom engineered centrifugal module features unique vanes to eliminate points of low efficiency, and a vortex arrestor to stop re-entrainment – ensuring minimal operating pressure loss and maintaining excellent liquid removal, even at low velocity. Remove 99% of bulk water when tested in accordance with ISO 12500-4

Tested performance

With exceptional performance at any flow rate, the new Ultimate water separator is perfect for use with variable speed compressors.

Ultimate filters - Threaded filters

Features & Benefits

- ▶ Flow-optimised design
- ▶ Improved air flow characteristics
- ▶ Reduced energy consumption
- ▶ Reduced costs of owner ship
- ▶ 6 filtration grades
- ▶ Increased performance
 - Significantly reduced differential pressure <125 mbar
 - Exceptional oil aerosol and particulate removal
- ▶ New filtration technology
 - NEW deep pleated media
 - NEW housing design for flexible installation and simplified serviceability
 - NEW externally accessible drain
- ▶ Tested and validated in accordance with ISO 12500-1 & ISO 8573-1:2010
- ▶ Dead stop head to bowl connection with lock indication for safety closure
- ▶ Corrosion protected housings: internal and external electrophoretic paint finish followed by a tough polyester powder coating
- ▶ Unique, specially designed adapter for removal of the automatic and manual drains from the bowl without a need to open the filter (for sizes 119-2550 m³/h)
- ▶ Multiple options
 - Differential pressure gauge with/without potential free contact
 - Manual drain
 - Automatic drain
 - Electronic drain
 - Wall brackets
 - Connection kits
- ▶ Two ranges available:
 - HE version with differential pressure gauge
 - S version without differential pressure gauge

General Specifications

- ▶ Significantly reduced differential pressure <125 mbar
- ▶ Maximum working pressure: 16 bar(g)/232 psi(g)
- ▶ With manual drain: up to 20.7 bar(g)/300 psi(g)
- ▶ Available from 1/8" to 3"
- ▶ Flow rates from 10-2550 m³/h (6-1500 cfm)

With energy efficiency and low total cost of ownership the Pneumatech Ultimate Filter surpasses conventional filters in the market place, providing to be the most advanced filter yet.

with the new element design, significantly improves air flow and performance, making the Ultimate filter one of the most energy efficient filter housings available.

The expertly engineered Ultimate Series not only achieves the highest air purity standards in line with ISO 8573-1:2010, it also incorporates the latest in filtration technology. The new filter housing reduces differential pressure loss which, when combined

With a range that incorporates coalescence filters, dust filters, activated carbon filters and water separators, available in a wide range of port sizes suitable for installation worldwide.

Ultimate filters - Elements

Features & Benefits

- ▶ Push fit Pneumatech filtration
- ▶ High quality stainless steel cylinders
- ▶ Custom engineered
- ▶ Custom outer drainage layer
- ▶ Unique element end cap
- ▶ Piracy protection (from size 3)
- ▶ Color coding system for optimum identification

General Specifications

- ▶ 6 filtration grades: coalescence, dust & oil vapor filtration

Market-leading filtration performance

To ensure optimal performance and low cost, filter elements should be replaced with original parts every 12 months/8000 hours (whichever comes first). Activated carbon filter elements should be replaced every 6 months/1000 hours (whichever comes first).

Pneumatech utilizes deep pleated media to deliver market leading filtration performance. The new forward thinking design delivers exceptional results in both oil aerosol removal and particulate retention; significantly reducing differential pressure and energy consumption for low operational lifetime costs. Engineered to

deliver a step change in performance, the new ultimate element optimizes filtration efficiencies and produces compressed air in line with the highest standards of air purity, meeting the quality classes specified in ISO 8573-1: 2010.

Performance assured

Filter housing design

The ISO 8573 group of international standards is used for the classification of compressed air

- ▶ 1000 hour neutral salt spray test for corrosion to ISO 9227:2006
- ▶ Burst pressure tested in excess of 100 barg for a 5:1 safety factor
- ▶ Housings are pressure decay tested before despatch. Fine filters are 100% aerosol integrity tested

Element technology

The new series is available in a complete range of contamination removal grades designed to meet the compressed air purity requirements throughout industry

- ▶ ISO 8573-1:2010 compressed air purity standard
- ▶ ISO 12500 series international standard for compressed air filter testing

Independent validation

Housing are approved to international standards including:

- ▶ Pressure equipment directive 2014/68/EU - Lloyd's register EMEA - notified body no. 0038
- ▶ ISO 9001 quality systems - LRQ0930553 - Lloyd's register EMEA - notified body no. 0038
- ▶ CRN approved - CRNOE19418 - for use within Canada

FF 1 - 12 - Flanged filters

Features & Benefits

- ▶ Guaranteed air purity
 - High-efficient glass fiber and foam media
- ▶ No risks of:
 - Cracked filter media
 - Cylinder implosion
 - Top cap leakages
 - Oil re-entrainment
- ▶ Significant energy savings
 - Optimal filter media selection allows low pressure losses
 - Zero-loss electronic drain included as standard
- ▶ Highest quality standards
 - In-house research, development & production
 - Each filter subjected to rigorous quality control
 - Fully tested and qualified according to ISO standards
- ▶ Robust design
 - Stainless steel cores guarantee ultimate strength
 - Protection paper to avoid damaging of glass fiber media
 - Special coating ensures high corrosion protection, and therefore a housing lifetime of at least 20 years
- ▶ Easy service and installation
 - Bottom cover with special rotating system
 - Different grade, different colour
 - Differential pressure gauge, with voltage free contact

General Specifications

- ▶ Compressed air inlet pressure:
1-16 barg/15-232 psig
- ▶ Max. ambient air temperature:
66°C/151 °F (35°C/95 °F for V grade)
- ▶ Available grades:
 - P: pre-filter
 - G: fine filter
 - C: super fine filter
 - V: activated carbon filter for oil vapor
 - S: dust filter
 - D: dust filter- high efficient

Zooming in

Special rotating system of bottom cover

Pneumatech's flanged filter range contains the same type of robust, high-efficient filter cartridges as the threaded range. The cartridges are contained in a welded steel housing which is pressure-rated up to 16 barg / 232 psig and provided with flanged connections at the compressed air inlet and outlet. The filter housings are completely cleaned, zinc phosphate and KTL

coated at the inside and outside and externally painted afterwards. This guarantees a housing lifetime of at least 20 years.

All flanged filters are standard equipped with a zero-loss electronic drain and differential pressure gauge with voltage-free contact connections. The special rotating system of the bottom cover makes filter cartridge replacement very straightforward.

VT - Activated carbon towers + vessels

Features & Benefits

- ▶ Guaranteed air purity with residual oil content below 0,003 mg/m³
 - Superb 2-layer activated carbon material
 - Designed with sufficient safety margin
 - Performance certified by external body
- ▶ Significant energy savings & limited system operating costs
 - Optimal internal flow path
 - Average pressure drop of 125 mbar only
- ▶ Certified class 1 performance, according to ISO 8573-1:2010
 - If combined with Pneumatech oil coalescing filters (G & C)
- ▶ Compact and reliable product design
 - Wall-mounting kit, optional for VT1 - 7
 - Easy to lift, install and service
- ▶ The VT is capable of removing hydrocarbons, odors and oil vapors from compressed air

General Specifications

- ▶ Compressed air inlet pressure:
 - VT 1-9: 1-16 barg/15-232 psig (extruded Versions)
 - VT with optional oil indicator: 1-8,8 barg/15-127 psig
 - VT 11-15: 1-14,5 barg/15-210 psig (Welded Versions)
 - VT11-15: life time 12000 hours
- ▶ Ambient air temperature: (Extruded Versions)
 - -10 - 50°C/14 - 122°F
- ▶ Ambient air temperature: (Welded Versions)
 - -10 - 80°C/14 - 176°F
- ▶ Compressed air inlet temperature:
 - 1 - 66°C/34 - 151°F

Dust filter

ISO 8573-1:2010 Class 1 validation certificate

Pneumatech's VT activated carbon towers and vessels are high-efficiency filtration products designed to meet the most demanding industry applications. Examples are pharmaceutical, medical, food & beverage, electronics and chemical industries.

The VT is capable of removing hydrocarbons, odors and oil vapors from compressed air. The activated carbon layers will, by the use Activated carbon vessels for higher flows available on request. Please consult Pneumatech for further support.

1. Flow is measured at reference conditions: 1 bara and 20°C at operating pressure of 7 barg, inlet temperature 20°C & inlet PDP of 3°C at the outlet. of adsorption, reduce the residual oil content to less than 0,003 mg/m3. In combination with Pneumatech G and C filters, the VT meets the requirements of air purity class 1 for total oil, according to ISO 8573-1:2010 in a typical compressed air installation, as was certified by an external body.

HP - High Pressure Filters

Features & Benefits

- ▶ High reliability
 - High-performance aluminum or stainless steel housings to withstand ultimately high operational pressures
 - Double O-rings, epoxy sealed caps and anti-corrosive coated filter housing
- ▶ Maximum contaminant removal
 - Removal of dry and wet dust, particulates, oil aerosol and water droplets
 - High-efficiency glass fiber and fleece media
- ▶ Significant energy savings & limited system operating costs
 - Optimal design and filter media allow for low pressure drops
- ▶ Easy to service
 - Cartridge color based on type of filtration grade, makes it easy to service

General Specifications

- ▶ Operating pressures: 50-100-350 barg / 725-1450-5075 psig
- ▶ Operating temperature range:
 - 0-120°C/32-248°F (for grades S, D, G & C)
 - 0-35°C/32-95°F (for grade V)
- ▶ Available grades:
 - G: general oil coalescing filtration (max oil carry-over: 0,08 mg/m³)
 - C: fine oil coalescing filtration (max oil carry-over: 0,007 mg/m³)
 - S: general dust filtration (99,92% at MPPS)
 - D: fine dust filtration (99,98% at MPPS)
 - V: oil vapor filtration (max oil carry-over: 0,003 mg/m³)
- ▶ Inlet and outlet connections: threaded
- ▶ Housing material: Aluminum (50 barg/725 psig only) or stainless steel (complete range)
- ▶ Timer drain and manual drain for 50 bar filters available as an option

Applications

Laser cutting

PET bottling

Pressure testing of components

High-pressure die casting

Autoclave

Pneumatech's high pressure filters are engineered to cost effectively provide the best air purity and meet today's increasing quality demands up to working pressures of 350 barg/5075 psig. All high pressure filter housings are hydraulically tested to ensure safe and reliable operation at all times. The hydrostatic test certificate is supplied with every filter.

The high pressure filters are available in 3 pressure ranges. The 50 barg (725 psig) range is available in both aluminum and stainless steel housings. As the performance of both filters is the same, the choice between the 2 can be made based on the customer's preference. The 100 barg (1450 psig) and 350 barg (5075 psig) filters are available in stainless steel housings.

1. Flow is referred to an absolute pressure of 1 barg and temperature of 20°C

FP & FP HP - Process filters (incl. high pressure)

Features & Benefits

- ▶ Enhanced stainless steel (1,4301) filter housing
 - Designed for applications with high risk of corrosion
 - High hygiene standards
- ▶ Advanced filter cartridge design
 - High filtration efficiency
 - Guaranteed performance over the entire lifetime
 - Low pressure drop
- ▶ Ultimate strength
- ▶ 100% integrity tested (DOP test)
- ▶ All components meet the FDA requirements for contact with food in accordance with the Code of Federal Regulations (CFR), title 21.
- ▶ Wide range of cartridges to suit application needs

General Specifications: FP 1-18

- ▶ Stainless steel process filters
- ▶ Operating pressure: 10-16 barg / 145-232 psig
- ▶ Operating temperature range¹: 0-150°C / 41-302°F
- ▶ Body connections: DIN 11851 (Milk pipe connections)
- ▶ Surface finish: Ra 1.6, electro-polished
- ▶ Inlet and outlet connections: Threaded and flanged.

¹Operating temperature range can vary as per the filter element used.

In process industries where the risk of corrosion of the compressed air system components is high, Pneumatech's FP 1-18 process filter range provides the right solution. The filter housing is made out of stainless steel grade 1,4301. The surface has been smoothened with advanced mechanical and electro-polishing techniques to a level of Ra 1,6. To avoid

micro-organism contamination between the filter head and bowl, these are connected by a milk pipe connection as per DIN 11851.

The filter cartridges are available in 4 different filtration grades for a wide variety of applications. All cartridges have been extensively tested to guarantee the best filtration efficiency over the entire cartridge lifetime.

FS - Sterile filters

Features & Benefits

- ▶ Enhanced high-grade stainless steel filter housing
 - Designed for applications with high risk of corrosion
 - High hygiene standards thanks to sanitary couplings
- ▶ Advanced filter cartridge design
 - High microbiological filtration efficiency
 - Designed to withstand a large number of sterilization cycles thanks to silicon bonded joint and additional NOMEX layer
- ▶ Stainless steel cylinders and end-caps
- ▶ Low pressure drop
- ▶ 100% integrity tested (DOP test)
- ▶ All components meet the FDA requirements for contact with food in accordance with the Code of Federal Regulations (CFR), title 21.

General Specifications

- ▶ Operating pressure: -16 (12) barg/29-232 (174) psig
- ▶ Operating temperature range¹: -20°C to 150°C/-4°F to 302°F
- ▶ Body connections: DIN 11851 (Milk pipe connections)
- ▶ Surface finish: Ra 0.8, electro-polished
- ▶ Inlet and outlet connections: threaded

Pneumatech's FSI filters are designed for compressed air and gas applications that need to be free from microbiological contamination, and can thus be sterilized regularly.

Pneumatech's FSI filter housings are made out of stainless steel grade 1.4404, with a surface that has been smoothened to a level of Ra 0,8. There is no void inside the entire filter housing; and thus no risk of micro-organism contamination.

The filter elements are manufactured with silicon as bonded joint to ensure robustness at high operating and sterilization

temperatures. For the same reason, an additional NOMEX layer is used at the inside and outside of the filter element. The filter cylinders and end-caps are made out of stainless steel. This all results in a highly efficient and exceptionally strong filter, which keeps its performance after a large number of sterilization cycles.

Competitor spare parts - Alternative desiccants

Features & Benefits

- ▶ All types of desiccants, matched to the OEM performance
 - Activated alumina
 - Silicagel
 - Molecular sieves
 - Activated carbon
- ▶ High-quality supply at the lowest cost
 - Lowest total cost of ownership
 - Highest crushing resistance
 - Limited anti-aging effect

Why choose Pneumatech for alternative spare parts?

- ▶ Excellent customer service
- ▶ Over 250.000 parts available
- ▶ Same day shipping
- ▶ World class logistics
- ▶ Full track and trace of all shipments
- ▶ Competitive pricing & flexible discounts
- ▶ Customized labelling

Adsorption dryers can only be energy efficient if they contain premium desiccant material. The desiccant used in Pneumatech adsorption dryers is carefully selected from a wide range of European and North-American suppliers; and is suitable for all OEM machines including Domnick Hunter, Donaldson, Boge, Ingersoll Rand, Compair, Kaeser, Almig and many more.

Brands

Domnick Hunter	CompAir
Zander	Ingersoll Rand
Donaldson Ultrafilter	Boge
Hankison (SPX)	Almig
Deltech (SPX)	FST
CTA	KSI
Dollinger (SPX)	Parker Balston
Kaeser	And many more

Condensate Management

Pneumatech's condensate management portfolio includes solutions for separating, draining, detecting and treating oily condensate.

Water separators can be used downstream of the compressor instead of - or together with - the air receiver. We offer three types of condensate drains depending on your needs: a timer drain, a mechanical zero loss float drain and an electronic zero loss drain. Also for condensate treatment we give you the choice, i.e. between the cost-competitive ECOBOX solution and our premium, patented OWS technology.

WD - Water detector

Features & Benefits

- ▶ 24/7 peace-of-mind at a reasonable cost
 - Water level as low as 3 cl detected
 - Can be installed at every critical application in the compressed air network
- ▶ Transparency of operation
 - Alarm message on control panel
 - Potential-free contact to trigger alarm in control room
 - Test button for manual drainage
- ▶ Easy mechanical and electrical installation

General Specifications

- ▶ Water detector
- ▶ Operating pressure range:
0,2-16 barg/2,9-232 psig
- ▶ Operating temperature range:
1-60°C/34-140°F
- ▶ Power supply: 230VAC 50/60Hz

Options

Power supply
cable (2m)

Voltage-free contact
cable (5m)

Despite all efforts to make dryers, water separators and drains reliable, a failure can never be ruled out. The consequence of condensate water in your pipe network and operations can be dramatic: from corrosion and ice formation to bad product quality and process malfunctioning.

The installation of a Pressure Dew Point (PDP) sensor downstream brings a solution, but is often a too large investment.

Pneumatech's Water Detector (WD) provides peace-of-mind at an affordable cost. The WD gives an alarm as soon as a 3cl water level is detected. This alarm message is visible, audible and can be routed to a control room thanks to the potential-free contact. The ball valve at the outlet is meant to release water after an alarm situation and is closed during normal operation.

Technical Specifications for WD	
General characteristics	WD
First alarm level (cl)	3
Second alarm level (cl)	6,7
Max. power consumption (W)	10
Electrical connection	Solenoid plug type B - 2+PE
Potential free contact connection	M12 connector A-coding 4-pole Both Normally Open (NO) and Normally Closed (NC) possible
IP Protection	IP65
Physical characteristics	WD
Length (mm / inch)	160 / 6,3
Width (mm / inch)	69 / 2,71
Height (mm / inch)	116 / 4,5
Weight (kg / Lbs)	0,6 / 1,32
Connections	WD
Inlet	G1/2", horizontal + vertical
Outlet	Ball valve for condensate removal
Features	WD
Test button	Yes
Indicative LEDs	Yes
Potential free alarm	Yes

CDE 5-350 - Electronic zero loss drains

Features & Benefits

- ▶ No loss of compressed air
 - Automatic controlled drainage of condensate without compressed air loss.
- ▶ Maximum reliability
 - Built-in, easy to clean filter cup.
 - Control circuit: forced opening/closing cycles of the valve in case of clogged drain pipes.
 - Potential-free contact to trigger alarm in case of malfunction.
 - Test button for manual drainage.
- ▶ Easy installation and maintenance
 - Control panel displays all drain functions.
 - Straightforward mechanical and electrical connections.
 - Heater kits available to protect against freezing in cold environments.
 - Can be used for oil-lubricated and oil-free installations.

General Specifications

- ▶ Zero loss drain
- ▶ Operating pressure range: 0.2-16 barg/2.9-232 psig
- ▶ Operating temperature range: 1-60°C/34-140°F
- ▶ Compressor capacity: from 50 up to 18000 m³/hr*
- ▶ Power supply: 230VAC 50/60Hz, 24VAC 50/60Hz, 24VDC 50/60Hz, 115VAC 50/60Hz

*based on RH 60%, Tamb 20°C/68°F reference conditions

Options

- ▶ Heater kits
- ▶ Voltage-free contact cable for remote control

Options

Mounting kits

Wear kits

Power supply cable (2m)

Voltage-free contact cable (5m)

The Pneumatech CDE 5-350 is the top quality drain that removes moisture from your compressed air system with maximum reliability and efficiency. An electronic zero loss drain, it only releases condensate when needed without losing compressed

air and wasting energy. With advanced reliability features built in, the CDE gives you premium performance, peace of mind and operational savings.

Why do you need drains?

Atmospheric air always contains some moisture, also referred to as humidity. When air is compressed, the concentration of these water vapors increases. This moisture can cause all sort of

production problems, from corrosion in your piping system to faulty tools and compromised products. Drains are the components that physically remove this moisture from your system.

Zero loss drain design

- ▶ A sensor constantly monitors the storage tank. Condensate is only discharged when the maximum level has been reached.
- ▶ A small quantity of condensate remains to ensure no air is lost during removal.
- ▶ Control circuit automatically unclogs the drain pipes.
- ▶ Control panel displays all drain functions:
 - Power status
 - Alarm indicator
 - Test button for manual drainage

1. The calculation of compressor capacity is based on the maximum condensate drainage of a compressor aftercooler in moderate climate conditions.

CDT - Timer drains

Features & Benefits

- ▶ **Guaranteed reliability**
 - Compact design, made in house
 - Integrated ball-valve with double inlet thread ½" and ¼" and an integrated strainer easy to clean
 - Test button to condensate manually and check the valve function
- ▶ **Endless flexibility**
 - Simple to install and fully automatic
 - No limitation in air flow
 - Cycle and valve opening intervals can be set independently of each other
 - Supplied with 2m cable with solenoid plug
 - NPT connection available
- ▶ **IP65 enclosed**
- ▶ **Transparency of operation**
 - Two LEDs display shows the operating status

CDT HP - High pressure timer drain

Features & Benefits

- ▶ **Guaranteed reliability**
 - Compact design, made in house
 - Test button to condensate manually and check the valve function
- ▶ **Endless flexibility**
 - Simple to install and fully automatic
 - No limitation in air flow
 - Cycle and valve opening intervals can be set independently of each other
 - Supplied with connector plug type A (solenoid plug over moulded with 2m cable to be wired)
 - NPT connection available
- ▶ **IP65 enclosed**
- ▶ **Transparency of operation**
 - The display easily allows reading the set value
 - Two LEDs display shows the operating status

Pneumatech's CDT condensate drains discharge the condensate automatically, based on pre-set time intervals. The opening and closing times can be set with high flexibility, which make the drains suitable for almost all capacities. CDT drains are selected in heavy-duty operations, where the large cross-sections opening, and the simplicity of the drain are highly valued.

High pressure timer drain CDT HP are available for operating pressure up to 350 bar (400 bar for 115V).

Pneumatech's CDF drain discharges the condensate automatically and without compressed air losses up to 10 bar.

The condensate is accumulated in the aluminium receiver (pressure-proof housing) and as soon as the maximum level has reached, the condensate will be drained out without any air loss. The direct acting valve is piloting by a precise level float sensor that ensures reliability and efficiency. In its depressurized state the valve is closed (NC design).

The drain is equipped with an integrated venting function, which prevents the risk of possible air slots. The CDF drain has a well-proven, rugged aluminium design with threaded connections at inlet and outlet.

Features & Benefits

- ▶ No loss of compressed air
 - Automatic controlled drainage of condensate without any compressed air leak
- ▶ Plug-and-play solution
 - No power supply needed
 - No programming or calibration
- ▶ Guaranteed reliability
 - Large cross-section openings
 - Well-proven, rugged aluminum design
 - Provided with a separate manual drain to depressurize the pressure aluminium housing and allow manual discharge for venting or draining

OWS 25 - 5300 - Oil water separators

Features & Benefits

- ▶ Stable and reliable performance for weak as well as stable emulsions thanks to patented dual stage filtration technology
 - Filtering all types of condensate
 - No risk of spillage thanks to large capacity chamber design
- ▶ Eliminating all potential health issues
 - No standing or stagnant water
 - Optional anti-bacteria kit
- ▶ Accurate and quick indication of filter replacement thanks to saturation indicator
- ▶ Overflow indicator signalizes if the emulsion is flowing too quickly through the media
- ▶ DIBT certified
- ▶ Hassle-free maintenance with genuine service kits
- ▶ Optimized serviceability
 - Easy to remove first stage filtration bags
 - 2nd stage filter cartridge adapted from outside for easy exchange
 - Built-in wheels for larger cartridge for easy transport

General Specifications

- ▶ Service interval 4000 hours
- ▶ Oil water separator
- ▶ Clean wastewater with oil content at the outlet at just 10ppm, and the possibility of going to as low as 5ppm depending on the set-up
- ▶ Flow range at mild ambient conditions: 43-8998 m³/hr/25-5296 cfm
- ▶ Standard version with activated carbon for unstable emulsions such as those containing mineral oil
- ▶ Organoclay version for stable emulsions with synthetic oil as well as for polypropylen based lubricants

Options

Multiple inlet manifold

Wall mount brackets

Spill container

Photoelectric sensor

Pneumatech offers with the new OWS generation a patented way to turn oily condensate from mineral oil, synthetic oil as well as polypropylene based lubricants into harmless water that can be drained away, while capturing the oil to be easily disposed of in an environmentally friendly manner. The multi-stage separation process, using both buoyant oleophilic filters and activated carbon/organoclay ensures exceptional performance, lower disposal costs and trouble free operation.

The OWS range eliminates oil through multi-stage filtration rather than the conventional gravity systems which have limitations on the type of condensate that can be treated. As a result, the OWS separator capacity is not linked to the type of emulsion collected since. The OWS range also eliminates stable emulsions by using organoclay cartridge in the second filtration stage.

ECOBBOX 2 - 4 - Oil water separators

Features & Benefits

- ▶ Excellent performance
 - 2-stage filtration with advanced adsorption media
 - After separation, water contains oil levels below 15 ppm⁽¹⁾
 - Emulsion treatment possible (on request)
- ▶ Eliminating potential health issues
 - No standing or stagnant water
- ▶ Plug-and-play installation and service
 - Connection points at inlet
 - Compact footprint
 - No pre-soaking required
- ▶ Time-based service indicator and sampling kit (standard) to verify outlet concentration on a regular base.

Options

Extra 4 port kit

Pneumatech extends its cost-competitive ECOBOX condensate cleaning solution with 3 more models, up to 1400 m³/hr. The models are designed according to the same success factors: reliable double adsorption with recycled glass media, compact footprint, and easy installation and service.

Additionally the ECOBOX 2 - 4 has 4 connections points at the inlet; and a sample test point at the outlet.

- 15ppm is generally well below the acceptance level for disposal in the sewage, but due to strongly varying international and local regulations, it is the user's responsibility to consult local waste water discharge regulations and ensure compliance.
- In tropical climates (high ambient temperatures and humidity levels), the air generally contains more water vapor. The extra condensate, generated during the compression and cooling process of the air, shortens the contact time in the device, leaving less time for the media to absorb the oil. Climatic conditions used in the table above are defines as follows:
 - a. Cold climate conditions: average ambient temperature of 20°C/ 68°F- relative humidity of 50 %
 - b. Normal climate conditions: average ambient temperature of 25°C/ 75°F - relative humidity of 50%
 - c. Hot climate conditions: average ambient temperature of 35°/ 95°F - relative humidity of 70 %
- Pneumatech assumes as well maintained compressor plant and reasonable operating conditions. Performance on mineral or mineral-based lubricants should be as above, irrespective of compressor type, condensate drain technology or climate,provided the condensate produced is not a stable emulsion.

CA - Air cooled aftercoolers

Features & Benefits

- ▶ Highly efficient axial fans
- ▶ Cooling down to 10°C/18°F above ambient
- ▶ Negligible pressure drop
- ▶ Robust construction and compact design
- ▶ Easy to dismantle for cleaning

General Specifications

- ▶ Air cooled aftercooler
- ▶ Max. operating pressure: 15 barg/218 psig
- ▶ Operating temperature: 170°C/338°F
- ▶ Approach above ambient temperature: 10°C/18°F
- ▶ Flow Rate: 66 to 4500 Nm³/hr (39 to 2649 cfm)

Compressed air will always be 100% saturated with water when it leaves a compressor. But also the outlet temperature has an important influence on the water load downstream the compressor. In order to minimize the load – and thus size – of the downstream refrigeration or adsorption dryer, it is therefore recommended to install a highly efficient aftercooler between the compressor and the dryer.

Pneumatech's air cooled aftercoolers CA 1-14 consist of a reliable axial fan with supreme efficiency. The fan forces ambient air over the copper tubes and aluminum fins of the heat exchanger. Hence the compressed air is cooled down to only 10°C/18°F above ambient temperature.

In this way, the CA is a simple product, but with a major impact on the investment and lifecycle cost of your downstream equipment!

1. Flow refers to 1 barg and 20°C at 7 barg operating pressure.

Note : In- and outlet connections can be chosen freely in the 4 corners of the heat exchanger

CW 300 – 7390 - Water cooled aftercoolers

Features & Benefits

- ▶ Close temperature approach thanks to counter-current heat exchange
- ▶ Robust shell-and-tube design: stainless steel tubes within coated shell for premium installations
- ▶ Optional CU version
- ▶ Negligible pressure drop
- ▶ Compact design
- ▶ Detailed calculations available on request

General Specifications

- ▶ Water cooled aftercooler
- ▶ Operating pressure of compressed air: 0-10 barg/0-145 psig
- ▶ Operating temperature of compressed air: 2-200°C/35-392°F
- ▶ Flow Rate: 510 to 12550 Nm³/hr/
300 to 7387 cfm

Compressed air will always be 100% saturated with water when it leaves a compressor. But also the outlet temperature has an important influence on the water load downstream the compressor. In order to minimize the load – and thus size – of the downstream refrigeration or adsorption dryer, it is therefore recommended to install a highly efficient aftercooler between the compressor and the dryer.

Pneumatech's water cooled aftercoolers CW 300-7390 are robust shell-and-tube heat exchangers with excellent efficiency. Hot compressed air or gas passes through the stainless steel tubes while cooling water flows in counter-current around the tubes. This results in a minimal temperature difference between the outgoing compressed air and the incoming cooling water. Detailed design calculations are available on request.

⁽³⁾ Compressed air flow at 7 bar(g) working pressure and 50°C inlet temperature (100% saturated). Compressed air outlet temperature 10°C higher than inlet cooling water temperature.

⁽⁴⁾ At 25°C inlet cooling water temperature, 5°C differential water temperature.

Please consult Pneumatech team for accurate sizing based on the operating conditions. Given table is only valid at the reference conditions hence the sizing has to be validated to confirm the performance of the selected version.

Piping Systems

The optimal piping network is sized, planned and installed to support sustainable operational excellence in the production process. Material and product design, installation and maintenance costs, flexibility and safety.

They all influence your total cost of ownership and the level of efficiency in your production. If you are looking for a high performing and effortless system that can be customized to fit any production site, AIRnet will turn out to be the best investment choice you can make.

AIRnet - Aluminium range

Features and Benefits

- ▶ Time and tooling
 - Quick connections with no need to crimp, thread, solder or glue the pipe
 - No heavy tooling or machinery required
 - PF series and black series can be connected to any existing network via simple use of adaptor unions and nipple sockets
 - PF series is assembled by hand, a push of the pipe into the fitting is all it takes
- ▶ Modularity
 - Easy to handle and easy to work with lightweight materials
 - Modular design supports extensions and modifications to meet new demands
 - Components are interchangeable and reusable after disassembly
 - Quickdrops are easily mounted, both horizontally and vertically
- ▶ Sustainability
 - Optimized inner body design minimizes flow resistance and pressure drop in the fittings
 - Low friction factor and seamless connections minimize pressure drops in the pipe network
 - Superior sealing technology ensures a leak free system and maintains performance over time
 - Durable and corrosion resistant materials offers a maintenance free system
- ▶ Safety
 - Safety factor of 4 for all diameters (burst pressure)
 - Camera control and automatic assembly guarantee zero defect manufacturing
 - Plastic components and pipe clips comply to UL 94 HB and UL 94 V-2 for flammability
 - Torque indicators ensure sufficient torquing

AIRnet - Stainless steel range

AIRnet stainless steel is a piping system designed to deliver a fast, easy, reliable and clean distribution network for compressed air, nitrogen, vacuum specifically for industries that demand the highest quality of air.

Features and Benefits

- No corrosion, leak resistant and 10 year guarantee
 - Press fit system ensures fast installation with minimal tools
 - No welding, no threading: just push & press
 - Silicone free system
 - FKM Seal (approved by all international regulating bodies for Pharma, F&B)
 - Can be used for clean room applications (316 L)
 - Considerable savings on the labor cost
- Advantage of press connection
- 20% enlargement of the sealing surface area with a security seal ring minimizes the risk of accidents
 - Eliminates the risk of sealing ring being pressed out or damaged
 - The fit between the sealing ring and the groove makes the pipes insertion easier.

Air Receivers

Pneumatech offers receivers in a large variety of sizes and treatments to suit your needs. These can be used for compressed air or inert gases like nitrogen.

V Range - Air & Nitrogen receivers

Features & Benefits

- ▶ Available in variety of sizes and treatments to suit your needs
 - Painted vessels
 - Galvanized vessels
 - Vitrified vessels
- ▶ Equipped with connection kit as standard up to 3000 liters Including pressure gauge, safety valves, and ball valves.
- ▶ Vitroflex vessels are 100% water and steam resistant

General Specifications

- ▶ Types: painted - galvanized - vitrified (Vitroflex)
- ▶ Max. pressure:
 - Standard range: 11 barg/ 160 psig
 - Note: Each size will have different pressure rating. Refer table for specific details
- ▶ High pressure range: 16 barg/ 232psig
- ▶ Volume:
 - 100 - 5000 liters for standard range
 - 500 - 5000 liters for high pressure range

Connection Kit

Vessels have several functions: they stabilize pressure peaks and provide thus a stable air- or nitrogen flow; have a storage function in case of a high consumption; and help with the preliminary separation and removal of condensate.

Pneumatech offers a wide range of vessels capable of handling pressures up to 16 barg / 232 psig. They are available in 3 types: painted, galvanized and vitrified. Painted vessels are generally

used where receivers are not subjected to extreme weather conditions and perfectly clean air is not an absolute requirement. Galvanized vessels are used when there is a possibility of corrosion. Vitrified vessels (Vitroflex) are treated with vitreous enamel, which makes them 100% water and steam resistant.

PNEUMACHECK Advanced Services

A PNEUMACHECK audit will help you determine how you can maximize your air or gas equipment to improve its performance, energy savings, and sustainability.

PNEUMACHECK

Are you using your compressed air or industrial gas system optimally? If your answer is “I don’t know” or “definitely not”, you are losing a lot of money. Because the costs of an inefficient or unreliable installation quickly add up. A PNEUMACHECK audit will help you determine how you can maximize your air or gas equipment to improve its performance, energy savings, and sustainability.

Optimize your air, nitrogen and oxygen system

- ▶ Find out your compressed air or N₂ flow profiles.
- ▶ Test your compressed air system's moisture, oil vapor and particle content to determine whether your air quality meets your requirements.
- ▶ Test the purity of the N₂ and O₂ you generate.
- ▶ Measure the pressure (drops) in your air and N₂ network to identify potential energy waste.
- ▶ Find leaks in your air or N₂ system.
- ▶ Measure the energy consumption of your compressed air equipment, including your compressor and dryer.

The all-in-one PNEUMACHECK box

- ▶ Flow Check Universal (max. version, probe length 220 mm, with display)
- ▶ Check Box M3 with 2 digital and 2 analog inputs
- ▶ 1/2" ball valve stainless steel
- ▶ 3x welding nipples
- ▶ Connection cable 5m (ODU/M12)
- ▶ Drilling device
- ▶ PMH basic software
- ▶ Protection frame (up to 50 bar)

A complete auditing solution

With PNEUMACHECK, you get a comprehensive auditing solution, from accurate measurement to expert advice.

1. Measurement:

Our specialist comes to you to install the PNEUMACHECK Box, a plug-and-play measurement, monitoring and logging device. It comes with all the tools needed to connect to your installation. The equipment does not interfere with your production during the data gathering process.

2. Analysis and expertise:

Our experts analyze and summarize your data in one report filled with actionable insights.

3. Result:

Optimizing your air and gas system allows you to cut your energy costs, reduce your environmental footprint, and meet your quality and safety standards.

A wide range of PNEUMACHECK solutions

Pneumatech is the industry leader in air treatment and gas generation. Our range of PNEUMACHECK solutions helps you save money and improve your operational sustainability.

PNEUMACHECK audit	What we measure & optimize	How you benefit
Nitrogen and compressed air flow	<ul style="list-style-type: none"> Determination of your optimal gas generator size based on your current N₂ flow. Pre-check for compressed air leakages. 	<ul style="list-style-type: none"> Make the switch to producing your own N₂ based on a data-driven assessment of the benefits you will enjoy. Experience the energy efficiency and cost savings of generating N₂ with a system optimized to your needs and requirements. Get an overview of all leakages in your network.
Air and gas PDP	<ul style="list-style-type: none"> Measurement of moisture content in compressed air and gases. Analysis of dryer performance and efficiency. Prevention of condensate in pipework and at the application. 	<ul style="list-style-type: none"> Prevent damage to your air system, your pneumatic equipment and your products caused by condensate. Ensure the required PDP for your sensitive applications.
Air and gas pressure	<ul style="list-style-type: none"> Measurement of the pressure in your compressed air and gas installation. Measurement of the pressure drop in your air and gas piping, filters and dryers. 	<ul style="list-style-type: none"> Enjoy the cost and emissions savings of an optimized air and gas pressure and the elimination of pressure drops.
Air, gas and vacuum leakages	<ul style="list-style-type: none"> Detection and analysis of leaks in your air, gas and vacuum network. Sealing of leaks in your air, gas and vacuum system. 	<ul style="list-style-type: none"> Significantly reduce costs and improve your environmental footprint by eliminating energy waste because of leaks.
Air system power consumption	<ul style="list-style-type: none"> Measurement of your air system's actual performance, including your compressor and dryer's power consumption. Recommendations on how to adjust and optimize your air installation's performance and energy use. 	<ul style="list-style-type: none"> Enjoy the energy cost savings of optimizing your air system's power consumption. This will also reduce your environmental footprint.
Air oil vapor content	<ul style="list-style-type: none"> Testing for the presence of oil vapors. Checking if your compressed air meets your quality class requirements for the presence/absence of oil vapors. Checking if your installation meets breathing air standards. 	<ul style="list-style-type: none"> Prevention of compressed air quality issues, especially for sensitive applications.
Air particle content	<ul style="list-style-type: none"> Checking if your compressed air meets your quality class requirements for particle content. 	<ul style="list-style-type: none"> Prevention of compressed air quality issues that can affect your system, tools and final products.
Gas purity	<ul style="list-style-type: none"> Measurement of the purity of the N₂ or O₂ you generate. 	<ul style="list-style-type: none"> Ensure the quality of your N₂ or O₂ supply to prevent compromising your final product. Comply with Pharmacopeia and EU food grade standards. Meet breathing air safety requirements.

PNEUMACHECK - Nitrogen flow audit

Are you overpaying for nitrogen deliveries? Why? Producing your own nitrogen is the cost efficient, flexible and sustainable alternative. But don't just take our word for it. You can calculate your own N₂ cost savings. And it all starts with finding your true nitrogen requirements with PNEUMACHECK.

With a PNEUMACHECK nitrogen flow audit, you can...

- ▶ Find out your factory's N₂ flow profile
- ▶ Understand the nitrogen usage of the different applications and processes in your plant
- ▶ Identify if and where N₂ is being wasted
- ▶ Confidently select and size an on-site Pneumatech gas generation system to replace your liquid or bottle supply

On-site gas generation – the preferred solution

Many companies still purchase their nitrogen – even though producing N₂ on-site offers more advantages.

Here are just four:

- Greater cost-efficiency saves you money
- Eliminating bottle or liquid deliveries reduces your environmental footprint
- Take charge of your own N₂ supply
- Less hassle by removing supply logistics

PNEUMACHECK helps you save

Pneumatech is the industry leader in air treatment and gas generation. Our range of PNEUMACHECK solutions help you save money and improve your operational sustainability. Contact your Pneumatech expert to find out which PNEUMACHECK will benefit you most:

- Compressed air usage
- Air system leakage detection
- Moisture detection
- Compressed air quality audit
- Air and gas pressure measurement
- Nitrogen flow audit
- Oxygen flow audit

Did you know?

- Liquid nitrogen tanks can have more than 20% boil-off losses.
- Up to 10% of nitrogen in delivered cylinders cannot be used.
- The ROI of an on-site nitrogen generator can be less than 1- 2 years.

An A-Z nitrogen flow solution

With PNEUMACHECK, you get a complete nitrogen flow solution, from accurate measurement to expert advice:

1. Measurement:

- High-accuracy flow meter: Measures your N₂ flow and usage
- Data logger: Records your N₂ flow data and makes it available for analysis
- Installation equipment: All the tools to make a convenient connection with your installation

2. Analysis and expertise:

- Report: Our experts analyze and summarize your flow data in one report filled with actionable insights.
- Advice: Based on this data, we can simulate the on-site generation system that meets your specific requirements.

Measurement result example

Technical specifications

Pressure	standard up to 16 bar, up to 50 bar with use of frame (included)
Flow	up to 10,000 cubic meter per hour
Pipe diameter	½ - 6 in/DN 15 - 150 (up to DN 300 as an option)
Electrical supply*	100-240 VAC; 50/60 Hz

* the mobile Check Box provides up to 8 hours of continuous operation without electrical supply.

The process:

Our specialist comes to you to install the Pneumatech Flow Check Box, a plug-and-play flow metering, monitoring and logging solution. After installation, this measuring equipment will not impact your production processes.

The result:

You get a deep dive into your current gas usage and the options for optimizing your nitrogen systems and processes.

ICONS

Advanced connectivity for optimal performance
and remote monitoring

ICONS - Intelligent Connectivity System

The ICONS software is available for all our compressed air dryers and gas generators equipped with the Purelogic controller, allowing for remote monitoring. Please contact your local Pneumatech representative for more information.

Improve your Efficiency

- ▶ Avoid downtime
- ▶ Get noticed in case of warnings
- ▶ Get recommendations to improve the health of your installation
- ▶ Optimize your energy consumptions

Be in control

Monitor your compressed air installation from your computer, tablet or mobile device. Anywhere, any time.

Which ICONS user are you?

RightTime license

- Keep an eye on compressed air dryers & gas generators status and service requirements
- Get basic recommendations
- Easy access to service and advice

UpTime license

- Get a phone message in case of warnings or shutdowns
- Get recommendations to increase uptime
- Review the Health Score of your installation

Energy license

- Analyze and optimize the energy efficiency of your compressor room.
- Get access to performance indicators, benchmarks and trends.
- Optimize you installation with reports and recommendations.
